

Copilot Studio Training – Day 03

Agenda:

- Use Case 01 – Create your first Agent
- Introduction to Knowledge in Copilot Studio
- Different Knowledge Sources
- Use Public Facing Website as Knowledge Sources
- Use Files as Knowledge Source

Introduction to Agents:

- **AI Companion:** Handles a range of interactions and tasks.
- **Complex Conversations:** Resolves issues requiring detailed discussions.
- **Autonomous Actions:** Determines the best action to take based on instructions and context.
- **Language Models:** Coordinates multiple language models, instructions, context, knowledge sources, topics, actions, inputs, and triggers.
- **Multi-Channel Support:** Engages with customers and employees across websites, mobile apps, Facebook, Microsoft Teams, and more.
- **Productivity Boost:** Performs tasks to assist users and organizations.
- **Easy Creation:** Can be created without the need for data scientists or developers.

Components of Agents:

Knowledge:

- a. Add maximum 20 Knowledge sources.
- b. Adding knowledge sources enables you to provide business specific data which augments the responses of your agents.

Topics:

What are Topics?

- **Core Building Blocks:** Topics define how a conversation dialog plays out.

- **Discrete Conversation Paths:** Allow for natural and appropriate conversation flow.

Types of Topics

- **Default Topics:** Predefined topics that make an agent operational with core capabilities.
- **Custom Topics:** Created by users to add specific conversational abilities.
- **System Topics:** Manage specific conversation events and cannot be deleted, but can be turned off.

<https://learn.microsoft.com/en-us/microsoft-copilot-studio/authoring-system-topics?tabs=classic>

Topic Components

- **Trigger Phrases:** Phrases, keywords, and questions likely to be used by a user, which trigger the topic.
- **Conversation Nodes:** Action steps that define what the topic should do once triggered (e.g., ask questions, send messages, trigger a cloud flow, set variable values, or use branching logic).

Action

Here's a summary of actions in Microsoft Copilot Studio:

What are Actions?

- **Extend Capabilities:** Actions allow your agent to respond to users automatically or explicitly from within a topic.
- **Core Action Types:** Include prebuilt connector actions, custom connector actions, Power Automate cloud flows, AI Builder prompts, Bot Framework skills, and REST API connections.

What Can We Achieve with Actions?

- **Automated Responses:** Agents can automatically select the most appropriate action or topic to respond to a user.
- **Generative Orchestration:** Automatically generates questions to fill inputs needed for actions.
- **Contextual Responses:** Actions return information back to the agent to generate a contextual response to the user's query.
- **Customizable:** Actions can be configured to generate specific responses or ask for user inputs.

Analytics

Direct Line Speech

Email

Introduction to Knowledge in Copilot Studio

- **Knowledge Sources Overview:** Knowledge sources in Copilot Studio allow agents to use enterprise data from various platforms like Power Platform, Dynamics 365, websites, and external systems.
- **Generative Answers:** These enable agents to find and present information from multiple sources without creating specific topics. They can be used as primary information sources or as fallback sources.
- **Supported Knowledge Sources:** Includes public websites, documents, SharePoint, Dataverse, and enterprise data using Copilot connectors.
- **General Knowledge:** Agents can use their own general knowledge if the setting is enabled, allowing them to provide more comprehensive answers.
- **Enhanced Search Results:** This setting improves search results by incorporating semantic indexing, which requires a Microsoft 365 Copilot license.

The **Enhanced Search Results** setting in Microsoft Copilot Studio improves search results by incorporating semantic indexing. This feature, known as the semantic index for Copilot, requires that the agent shares a tenant with a **Microsoft 365 Copilot license**.

When enabled, it allows the agent to support SharePoint and Microsoft Graph connectors containing files up to 200 MB.

The feature is turned on by default. If you don't have a Microsoft 365 Copilot license in the same tenant as your agent, or if you experience lower response quality, you can turn off the feature.

- **Source Authentication:** Necessary for certain knowledge sources like SharePoint, Dataverse, and enterprise data using Microsoft Graph connectors.
- **Content Moderation:** Settings allow you to configure the level of content moderation, affecting the relevancy and quantity of answers provided by the agent.

Supported knowledge sources

Name	Source	Description	Number of inputs supported in generative answers	Authentication
Public website	External	Searches the query input on Bing, only returns results from provided websites	Generative mode: Unlimited Classic mode: Four public URLs (for example, microsoft.com)	None
Documents	Internal	Searches documents uploaded to Dataverse, returns results from the document contents	Generative mode: Unlimited Classic mode: Limited by the Dataverse file storage allocation	None
SharePoint	Internal	Connects to a SharePoint URL, uses GraphSearch to return results	Generative mode: Unlimited Classic mode: Four URLs per generative answers topic node	Agent user's Microsoft Entra ID authentication
Dataverse	Internal	Connects to the configured Dataverse environment and uses a retrieval-augmented generative technique in Dataverse to return results	Generative mode: Unlimited Classic mode: Two Dataverse knowledge sources (and up to 15 tables per knowledge source)	Agent user's Microsoft Entra ID authentication
Enterprise data using Copilot connectors	Internal	Connects to Copilot connectors where your organization data is indexed by Microsoft Search	Generative mode: Unlimited Classic mode: Two per custom agent	Agent user's Microsoft Entra ID authentication

Use Case 01 - Doctor Appointment Scheduler Bot with Conditional Flow

Bot Name: CareConnect

Description: CareConnect bridges the gap between you and your healthcare provider with seamless appointment booking.

You need to act as personal secretary of healthcare provider to take bookings from the patient.

Part 1: Make an Appointment

1. Greeting

- **Bot:** "Hello! I can help you schedule a doctor's appointment. Shall we begin?"
 - **User:** "Yes."
-

2. Choose Specialization

- **Bot:** "What type of doctor do you need?"
 1. General Physician
 2. Dentist
 3. Cardiologist
 4. Dermatologist"
 - **User:** "Dentist."
-

3. Emergency Check

- **Bot:** "Is this an emergency? (Yes/No)"

Condition:
 - If Yes:
 - **Bot:** "For emergencies, I recommend visiting the nearest hospital immediately. Would you like me to find the nearest hospital for you?"
 - **User:** "No."
 - **Bot:** "Okay. Let's proceed with scheduling an appointment."
 - If No:
 - **Bot:** "Alright, let's schedule your appointment."
-

4. Date Selection

- **Bot:** "When would you like the appointment?"

- **User:** Can enter a date.

5. Ask some basic questions:

- **Bot:** You can ask as individuals questions or as an adaptive cards.

Book an Appointment

Enter Name:

Name

Enter Phone Number:

Phone Number

Enter Email Address

Placeholder text

Submit

6. Save the Response and Give the confirmation message with Booking reference number.

- **Bot:** "Congratulations! Ticket has been created successfully. Here's your Booking Reference ID. BookingID"
- **Bot:** End of conversation.

Part 2: Check the Schedule Booking Status

You can able to check the schedule of the booking status at any point of time.

Prompt: Let user to check the booking appointment they scheduled. Ask them for their Booking Reference Number and based on that tell them the current status of their application

1. Check Booking Status:

- **Bot:** "Enter a booking ID"
- **User:** User enters booking reference ID

RegEx Entity: Booking ID
booking id for a requested booking reference number
Pattern
BOOK-\d{4,6}

2. Check Status from Stored Dataverse table and show the response.

- Your Booking ID is: BookingID and your booking status is: Status:

3. If the system unable to find the booking ID then ask them to enter booking Id again.

- **Bot:** “Unable to found your status. Please enter different Booking ID and Try again.”
 - **User:** Redirected to the Q1.
-

4. End of Conversation

Dataverse Tale Structure:

Name	Text
Email	Text
Phone Number	Text
Doctor Type	Text
Booking Datetime	Datetime
Status	Choice (Pending, Confirmed, Cancelled, Closed)
Booking ID	Auto Number
Urgency	Text

Key Learning Highlights

1. Understanding of Topics:

Trigger phrases are phrases, keywords, and questions that a user is likely to use, related to the topic. When a user says something to the agent that is close to the configured trigger phrases, the matching topic gets triggered.

Conversation nodes can be seen as action steps and define what the topic should do once it's triggered (for example, ask questions, send messages, trigger a cloud flow, set variable values, or use conditions for branching logic).

2. Understanding of Entities:

3. Understanding of Adaptive Cards:

4. Call Power Automate Flow

5. Use of Actions with native connectors

Use Case 02: Support Ticketing System with the help of AI (Home Work)

We want to create one IT Helpdesk ticketing system with the help of AI Prompt.

Name of the Bot: IT Helpdesk Agent

Description: You're IT Chatbot. Your task is to help people to raise a support ticket.

Tone: The chatbot should maintain a professional yet friendly and empathetic tone throughout the conversation.

Features

1. Raise a Support Ticket

- **Greeting and Context:** Start with a friendly greeting and confirm the user's intent to raise a support ticket.
 - Example: "Hi! I'm here to help you raise a support ticket. Let's get started!"
- **Issue Category:** Ask the user to specify their issue category:
 - Options: "Is this related to hardware, software, or license management?"
- **Issue Description:** Prompt the user to describe their problem briefly.
 - Example: "Please provide a brief description of the issue you're facing."
- **Email Address:** Request the user's email address to associate with the ticket.
 - Validation: Ensure the email format is valid.
- **Priority Selection:** Allow the user to set the priority of their ticket.
 - Options: "What is the priority of this issue? (High, Medium, Low)"
- **Preferred Contact Method (Conditional):**
 - **High or Medium Priority:** Ask the user to select their preferred contact method.
 - Options: "Would you prefer to be contacted via Email or Phone?"
 - For Phone, request the user's phone number.
 - **Low Priority:** Skip the contact method step.
- **Ticket Confirmation:** Provide a summary of the ticket details.
 - Example: "Here's your ticket summary:
 - Issue: Hardware
 - Description: Laptop not turning on
 - Priority: High
 - Contact Method: Phone (123-456-7890)."
- **Success Message:** After confirmation, display a success message.

- Example: "Your ticket has been generated successfully! One of our agents will contact you within 4 to 6 business hours."

2. Check Ticket Status

- **Greeting:** Greet the user and confirm their intent to check the status of an existing ticket.
 - Example: "Hi! Would you like to check the status of an existing support ticket?"
- **Ticket ID Request:** Ask the user to enter their ticket ID.
 - Validation: Ensure the ticket ID is in the correct format.
- **Status Retrieval:** Fetch and display the ticket status.
 - Example: "Here's the status of your ticket:"
 - Ticket ID: 12345
 - Status: In Progress
 - Assigned Agent: John Doe
 - Estimated Resolution Time: 2 hours."
- **Follow-Up:** Optionally, allow the user to raise another ticket or return to the main menu.

Dataverse table structure:

Email Address	Text
Issue Category	Text
Issue Description	Text
Issue Priority	Text
Preferred way of contact	Text
Issue Status	Choice (Pending, Completed, In Progress)
Resolution Comments	Text
Ticket Reference Number	AutoNumber

Solution:

Create first Topic with AI:

Prompt:

Let user to raise a support ticket, ask for any problem related hardware, software or any License related issues. Ask user to enter their email address and the priority of the ticket as High, Low or Medium. If their Priority is High or Medium ask them an option to choose the proffered contact method as Email or Phone. For Low priority do not required a preferred contact method. At the end give them a message saying ticket generated successfully and their agent will contact them in 4 to 6 business hours!

Key Learning Highlights

- Create topic with Generative AI

Use Case 03 - Australian Taxation Office (ATO)

Objective

The Australian Taxation Office (ATO) wants to enhance user experience by providing Australian citizens with a **conversational AI chatbot** named **TaxMate**. TaxMate will help users navigate ATO services, answer tax-related questions, and simplify compliance by leveraging **Generative AI capabilities** in Copilot Studio.

Use Cases:

- **Tax Filing Assistant:** Help individuals and businesses with tax filing, deductions, and compliance requirements.
- **Small Business Tax Advisor:** Provide tailored tax advice for startups, including GST registration and BAS reporting.

Knowledge Source:

<https://www.ato.gov.au/>

Bot Name: TaxMate

Solution:

Prompt to create a Chatbot:

You are TaxMate, a friendly tax assistant created to help Australian citizens with their tax-related questions. Always respond in simple, easy-to-understand language. Avoid using complicated tax terms unless necessary, and explain them clearly when used. Provide clear, step-by-step answers wherever possible. If the user needs more help, guide them to the appropriate ATO resource or service

What to Emphasize

1. **Clarity and Simplicity:**
 - Use plain, everyday language.
 - Break down complex processes into simple, step-by-step instructions.
 - Example: Instead of saying "Submit a Notice of Assessment," say "Check your tax return status by logging into your myGov account."
2. **Empathy and Approachability:**
 - Acknowledge users' concerns or confusion.
 - Example: "I understand taxes can be tricky. Let me help you step by step."
3. **Relevance:**
 - Tailor responses to the user's query without unnecessary details.

- Example: If asked about tax deadlines, don't explain how to lodge a return unless asked.

4. Actionable Guidance:

- Provide direct instructions or steps they can take immediately.
- Example: "You can track your refund by logging into your myGov account and going to the 'Tax' section."

5. Friendly Tone:

- Maintain a conversational and supportive tone to reduce anxiety around taxes.
- Example: "Don't worry, I'm here to make this easy for you!"

6. Transparency:

- Be honest if TaxMate cannot provide an answer or the query requires human assistance.
- Example: "I recommend contacting the ATO directly for this. Here's their support number: 13 28 61."

7. Use of Examples:

- Provide relatable examples to explain concepts.
- Example: "If you work from home, you can claim a deduction for things like internet and electricity."

What to Avoid

1. Jargon or Complicated Terms:

- Avoid technical tax language unless absolutely necessary. If used, explain it.
- Example: Replace "depreciating assets" with "items that lose value over time, like a computer."

2. Overloading with Information:

- Don't provide too many details at once. Keep responses focused and concise.

3. Vague or Generic Answers:

- Avoid saying, "Check the ATO website" without offering a direct link or specific resource.

4. Legal or Financial Ambiguity:

- Avoid speculative or uncertain advice. Stick to verified information.
- Example: Instead of "You might be able to claim this," say, "You can claim this if it directly relates to your work."

5. Over-Promising:

- Never promise outcomes like faster refunds or guarantee eligibility without full context.
- Example: "Refund processing times vary, but most are completed within 2 weeks."

6. Negative or Dismissive Tone:

- Avoid language that could make users feel discouraged or unsupported.
- Example: Don't say, "You should already know this."

7. Unnecessary Redirection:

- Don't redirect users to the ATO website unless TaxMate cannot answer their query fully. Always provide helpful context when redirecting.

Questions for TaxMate to test:

1. Tax Filing Questions

- "How do I lodge my tax return?"
 - "What documents do I need for filing my tax return?"
 - "Am I eligible for tax deductions as a remote worker?"
 - "How can I check the status of my tax return?"
 - "What is the deadline to file my tax return for this financial year?"
-

2. Tax Refunds

- "How long will it take to receive my tax refund?"
 - "Why is my tax refund delayed?"
 - "How do I claim a refund for overpaid tax?"
-

3. Tax Deductions

- "What expenses can I claim as a small business owner?"
 - "Can I claim a deduction for work-related travel expenses?"
 - "How do I calculate depreciation for my assets?"
 - "Are education expenses tax-deductible?"
-

4. Business Taxation

- "How do I register my business for GST?"
 - "What is a Business Activity Statement (BAS), and how do I lodge it?"
 - "When is my BAS payment due?"
 - "What is the current corporate tax rate?"
 - "What tax obligations do I have for hiring contractors?"
-

5. Superannuation

- "How much superannuation do I need to pay my employees?"
 - "What is the current superannuation guarantee rate?"
 - "How do I find my lost super accounts?"
 - "What is the cap for concessional contributions?"
-

6. Tax Compliance

- "What should I do if I can't pay my tax on time?"
 - "How do I set up a payment plan with the ATO?"
 - "What does a Notice of Assessment mean?"
 - "How do I respond to an ATO audit?"
-

7. Capital Gains and Investments

- "How is capital gains tax calculated for property sales?"
 - "Do I need to pay tax on cryptocurrency transactions?"
 - "What is the tax treatment for dividends from shares?"
-

8. Non-Residents & International Taxation

- "Do I need to pay tax on income earned overseas?"
 - "What is the withholding tax rate for foreign residents?"
 - "Can tourists claim back GST when leaving Australia?"
-

9. Tax Tools and Resources

- "How do I create a myGov account to access ATO services?"
 - "How can I update my Tax File Number (TFN) details?"
 - "Where can I find my past tax returns?"
 - "What is my tax-free threshold?"
-

10. Tax Rates and Changes

- "What are the current personal income tax rates?"
 - "Has there been any change to the GST rate this year?"
 - "What is the low-income tax offset, and am I eligible?"
-

11. Specific Scenarios

- "What happens if I lodge my tax return late?"

- "How do I claim deductions for a home office setup?"
- "What are the tax benefits for first-time home buyers?"
- "How does salary sacrificing impact my tax?"

12. FAQs and Troubleshooting

- "What should I do if I forgot my TFN?"
- "How can I correct a mistake in my tax return?"
- "Why was my tax refund lower than expected?"

CONFIDENTIAL

Use Case 04: Adding Files As Knowledge Source in TaxMate

Overview

Build a chatbot, **TaxMate**, using the knowledge extracted from three documents:

1. **Agreement on Double Taxation and Fiscal Evasion**
2. **The Institutional Framework of Taxation in Australia**
3. **Australia Taxation CPA Program Subject Outline**

1. Australia.pdf

Name: Agreement on Double Taxation and Fiscal Evasion Between India and Australia

Description:

This document contains the agreement between India and Australia to prevent double taxation and fiscal evasion concerning income taxes. It outlines the scope, applicability, and provisions of the agreement, including definitions, taxation laws, and specific guidelines for individuals and businesses operating in both countries. Key topics include permanent establishments, tax residency, business profits, income from property, and royalties.

2. Institutional_Framework_of_Taxation_in_Australia.pdf

Name: The Institutional Framework of Taxation in Australia

Description:

This document explains the foundational elements of the Australian taxation system. It provides an overview of the constitutional framework, legislative processes, and roles of various government bodies like Parliament, the Treasury, and the Australian Taxation Office (ATO). It also covers historical developments, principles of good taxation (e.g., equity, simplicity, neutrality), and the structure of tax reviews in Australia. The document discusses different types of taxes (income tax, GST, fringe benefits tax) and state-federal revenue-sharing agreements, along with governance and enforcement.

3. subject-outline-australia-taxation.pdf

Name: Australia Taxation CPA Program Subject Outline

Description:

This document is an academic guide designed for CPA students. It outlines the structure, content, and learning objectives for a taxation course focusing on Australian tax laws. The document covers income tax, GST, fringe benefits tax, and capital gains tax. It also addresses the taxation of individuals, businesses, partnerships, trusts, and superannuation funds. Additionally, it includes modules on ethical and professional responsibilities, tax planning, avoidance, and evasion.

The chatbot will assist Australian citizens, businesses, and students in understanding Australian taxation, double taxation agreements, and tax compliance responsibilities. TaxBot will use **Generative AI** to provide clear, actionable answers in simple language.

Testing Questions:

1. Can you explain the difference between income tax and GST in simple terms?
2. How can I avoid double taxation if I work in both India and Australia?
3. What are the responsibilities of the Australian Taxation Office (ATO)?
4. What happens if I don't file my tax return on time in Australia?
5. How do tax treaties impact business profits for multinational companies?
6. What is taxable income, and how is it calculated?
7. What are the basic principles of fringe benefits tax (FBT)?
8. How does GST work in Australia?
9. What is capital gains tax (CGT), and how is it calculated?
10. What tax offsets and rebates are available for individuals?
11. What deductions can I claim if I run a small business from home?
12. How does tax treatment differ for residents and non-residents in Australia?

Supported document types

<https://learn.microsoft.com/en-us/microsoft-copilot-studio/knowledge-add-file-upload>

- Word (doc, docx)
- Excel (xls,xlsx)
- PowerPoint (ppt, pptx)
- PDF (pdf)
- Text (.txt, .md, .log)
- HTML (html, htm)
- CSV (csv)
- XML (xml)
- OpenDocument (odt, ods, odp)
- EPUB (epub)
- Rich Text Format (rtf)
- Apple iWork (pages, key, numbers)
- JSON (json)
- YAML (yaml, yml)
- LaTeX (tex)

Known Limitations:

① Important

- Image, video, executables, and audio files can't be used as uploaded documents.
- Images are only supported when they're embedded in PDF files.
- Embedded images are supported in all languages.
- Icons aren't supported.
- Files larger than 512 MB aren't supported.
- Files with encryption, such as sensitivity labels or password protection, aren't supported.
- An agent can include up to 500 files as knowledge.

Publish your Agent

- Publish Agent on Public Facing Website
- Publish Agent in Teams
- Publish Agent in Custom Website

Use Case 05 - Case Study: Movie Agent – Simplifying Movie Ticket Booking (HomeWork)

Objective

To develop a chatbot named **Movie Agent** that helps users find information about movies, provides expert recommendations, and allows seamless movie ticket booking. The chatbot simplifies the ticket selection process and caters to various user queries, such as movie ratings, star casts, and languages.

Features of Movie Agent

1. Expert Knowledge Base:

- Answers questions about movies, such as ratings, star casts, songs, box office collections, and more.
- Provides information about new releases and popular series like *Pushpa 2*, *Emergency*, *Sabarmati Express*, and *Mismatched Season 3*.

2. Ticket Booking Process:

- Users can book tickets for movies by selecting options for language, ticket range, and show timings.
- Supports multiple languages for *Pushpa 2* (Hindi, Telugu, English) and defaults to Hindi for other movies.

3. User-Friendly Interface:

- Offers a step-by-step process in simple language to ensure clarity and convenience for users.
- Provides a summary and booking confirmation at the end.

Process:

Here's the ticket booking process in a clear, step-by-step format:

1. Movie Selection:

- The user selects a movie from the options: *Pushpa 2*, *Baby John*, or *Sabarmati Express*.

2. User Details:

- Prompt the user to enter their **email address** and **phone number** to proceed with the booking.

3. Language Selection:

- For *Pushpa 2*: Provide language options **Hindi**, **Telugu**, and **English**.
- For *Baby John* and *Sabarmati Express*: Default language is **Hindi** (no additional options).

4. Ticket Price Range Selection:

- Let the user choose their preferred ticket range:

- ₹150-200
- ₹200-250
- ₹250-350

5. Show Timing Selection:

- Offer the user showtime options to choose from:
 - 9:00 AM - 12:00 PM
 - 12:00 PM - 3:00 PM
 - 3:00 PM - 6:00 PM
 - 6:00 PM - 9:00 PM

6. Booking Confirmation:

- Display a summary of the booking, including:
 - Movie name
 - Selected language
 - Ticket price range
 - Show timing
 - User's email and phone number
- Ask the user to confirm the details.

7. Complete Booking:

- Once the user confirms, finalize the booking and display a confirmation message.

Solution:

Bot Name: Movie Agent

Prompt to create a Movie Agent:

You are Movie Agent, a friendly and knowledgeable expert on movies and cinemas. Your role is to assist users with their movie-related queries, including information on the latest movies, ratings, star casts, songs, box office collections, and more.

You need to:

- Answer questions based on your knowledge base in simple, easy-to-understand language.
- Provide accurate and concise information to help users learn about movies effortlessly.

Always respond in a friendly, professional, and approachable tone. Your goal is to make movie inquiries and ticket bookings as seamless and enjoyable as possible.

AI Based Topic Prompt:

Let user to book a ticket. Let them choose from the different movie like Pushpa 2, Baby John, Sabarmati Express. After that ask them to enter their email address and phone number. After that they need to select language for the movie. All the movie has by default option as Hindi. Only Pushpa 2 has additional language option like Telugu and English. Once they select the language ask them to select the ticket range 150-200, 200-250 and 250-350. Once they select, provide them to choose show timings like 9 to 12, 12 to 3, 3 to 6 and 6 to 9. At the end show them booking confirmation and book the ticket.

CONFIDENTIAL

<https://learn.microsoft.com/en-us/microsoft-copilot-studio/advanced-generative-actions>

Behavior	Classic orchestration	Generative orchestration
Topics	Topics are selected based on matching a user query with trigger phrases	Topics are selected based on the description of their purpose
Actions	Actions can only be called explicitly from within a topic	The agent can choose to call actions based on their name and description
Knowledge	Knowledge can be used as a fallback when no topics match a user's query (or called explicitly from within a topic)	The agent can choose to proactively search knowledge to answer a user's query.
Use of multiple topics, actions, knowledge sources	Agent tries to select a single topic to respond to the user, falling back to knowledge if configured	The agent can use a combination of topics, actions, and knowledge
Asking users for input	You must use question nodes in topics to author messages prompting the user for any required information	The agent can automatically generate questions to prompt users for any missing information required to fill inputs for topics and actions
Responding to a user	You must use message nodes in topics to author messages responding to the user (or call an action from a topic)	The agent automatically generates a response, using the available information from topics, actions, and knowledge that it has called
