

Copilot Studio Training – Day 04

Agenda:

- Copilot Studio Licensing
- Use SharePoint as Knowledge Source

Copilot Studio Licensing in Details

1. Microsoft Copilot Studio pay-as-you-go meter

The Copilot Studio pay-as-you-go meter enables customers to postpay based on the number of Copilot Credits consumed in a billing month. This meter allows for flexibility, scalability and seasonality with no interruptions due to overages.

2. Microsoft Copilot Studio license (i.e., Copilot Credit capacity pack)

Copilot Credits are also offered through the Microsoft Copilot Studio license subscription (i.e., Copilot Credit capacity pack). A quantity of licenses should be purchased for the expected number of Copilot Credits that will be consumed by the tenant in a month.

It is strongly recommended that customers who choose the subscription license also set up the Copilot Studio pay-as-you-go meter in case of any overages.

3. Copilot Credit Pre-Purchase Plan (P3)

The Copilot Credit P3 Plan offers organizations a one-year, pay-up front purchase option for Copilot Credits at tiered discounts. Customers purchase a pool of Copilot Credit Commit Units (CCCUs) that automatically covers the usage of Copilot Credits. Each CCCU is worth \$1 of Copilot Credit usage and is equivalent to 100 Copilot Credits.

4. Microsoft Agent Pre-Purchase Plan (P3)

The Microsoft Agent P3 Plan provides a unified one-year, pay-upfront option for consuming agentic services across Copilot Studio and Microsoft Foundry at tiered discounts. Customers purchase a pool of Agent Commit Units (ACUs) that automatically cover eligible usage in both platforms. Each ACU is worth \$1 of Copilot Credit and Microsoft Foundry usage and is equivalent to 100 Copilot Credits.

Agent feature	Billing rate	Used by Microsoft 365 Copilot licensed user ¹
Classic answer	1 Copilot Credit	No charge
Generative answer ²	2 Copilot Credits	No charge
Agent action	5 Copilot Credits	No charge
Tenant graph grounding for messages	10 Copilot Credits	No charge
Agent flow actions <i>per 100 actions</i>	13 Copilot Credits	No charge
AI tools		
- Text and generative AI tools (basic) <i>per 10 response</i>	1 Copilot Credit	No charge
- Text and generative AI tools (standard) <i>per 10 response</i>	15 Copilot Credits	No charge
- Text and generative AI tools (premium) <i>per 10 response</i>	100 Copilot Credits	No charge
- Content processing tools <i>per page</i>	8 Copilot Credits	No charge

Use SharePoint as Knowledge Source

<https://learn.microsoft.com/en-us/microsoft-copilot-studio/knowledge-add-sharepoint>

Use Case 1: “Sales Insights Copilot”

The organization uses a **SharePoint Document Library** to store a wide range of business-critical documents such as:

- Quarterly and annual reports
- Sales and performance presentations
- Contracts and agreements
- Policy and compliance documents
- Program and project documentation

Teams across the organization (Sales, Legal, Product, Finance, Operations, Leadership) need **fast, reliable answers** from these documents **without manually opening files**.

Solution

A **single Copilot Studio agent** connected to **multiple SharePoint documents** that acts as a **trusted knowledge assistant** for the organization.

The agent retrieves information **only from approved SharePoint files**, summarizes it, and provides clear, grounded answers.

Agent Design (High Level)

- **One Copilot Studio Agent**
- **Knowledge Source:** SharePoint Document Library (multiple files)
- **Grounding Enabled:** Answers strictly based on documents

Limitations:

<https://learn.microsoft.com/en-us/microsoft-copilot-studio/requirements-quotas#copilot-studio-web-app-sharepoint-limits>

Copilot Studio web app SharePoint limits

- Only [modern SharePoint pages](#) are supported. However, modern pages containing SPFx components aren't supported.
- Content from classic ASPX pages on SharePoint isn't used to generate answers.
- SharePoint sites containing the following file types can be used as knowledge sources:
 - Word documents (DOC/DOCX)
 - PowerPoint (PPT/PPTX)
 - PDF files
- For better search results from SharePoint and support of files up to 200 MB in size, use a Microsoft 365 Copilot license in the same tenant as your agent, and turn on [Tenant graph grounding with semantic search](#).
- You can also load individual files and folders. Files can be up to 512 MB in size. For more information, see [Unstructured data as a knowledge source](#).
- While you can add structured files, such as XLSX files from SharePoint, agents can't write and run code. Responses to analytical questions might not be optimal.
- For makers without the Microsoft 365 Copilot license in the same tenant as their agent, due to memory limitations, generative answers can only use SharePoint files that are under 7 MB. If a file is larger than 7 MB, consider splitting it into multiple smaller files. For more information, see [File size support](#).
- We recommend omitting [https://](#) from the URL. Recognized SharePoint URLs are from the *sharepoint.com* domain.
- SharePoint sites with an accordion navigation menu or a custom CSS aren't used to generate answers.
- If you want to use a dynamic SharePoint URL using a Power Fx formula, you must use the **Classic data** option, which is available from the generative answers node properties. For more information on how to use SharePoint content with a generative answers node in a topic, see [Use SharePoint content for generative answers](#).
- Queries to a SharePoint knowledge source that reference a file or document name can't be answered. For example, if a user asks, "What is the mitigation provided in *file-name.pdf*?" Or, "Tell me the file name that contains information on bug 2020213?"
- Access to SharePoint documents and **Tenant graph grounding with semantic search** don't support manual authentication.
- Document libraries aren't supported as lists.
- SharePoint list queries only return data from the first 2,048 rows of data.
