

Copilot Studio Training – Class 01 (Official AI GENERATED Notes)

Copilot Studio Training Program – 2026

Class 01: Introduction to AI & Copilot Studio

Purpose of Class 01

This class is a **foundation class** designed to:

- Set **expectations** for the full training program
- Explain **how the training will run**
- Introduce **AI fundamentals**
- Clarify **what Copilot Studio really is**
- Align everyone (beginners to experienced professionals) on the **same baseline**

 This class is **conceptual**, not hands-on heavy
Practical building starts from **Class 3 onwards**

Training Guidelines & Housekeeping

Recordings & Access

- Every session is **recorded**
- Recording shared via **email within 1–2 hours**
- Access valid for **1 full year**
- Practice files, PDFs, and demos will be shared

Usage Rules

- Recording access is **personal**
- Do **not forward** recordings or credentials
- Do **not use AI tools** to auto-join or summarize live sessions
- All links are **traceable**

Class Etiquette

- Keep microphone **muted**
- Raise hand to ask questions
- Ask questions:
 - Via mic

- Via chat
 - Dedicated **Q&A slots** after topics
-

3 Overview of the Full Training Journey (13 Classes)

◆ Phase 1 – Foundation (Class 1–3)

- AI basics & terminology
- GPT, LLMs, tokens
- Copilot vs ChatGPT
- Copilot Studio introduction
- Agent fundamentals
- Knowledge & topics

◆ Phase 2 – Autonomous Agents (Class 4–6)

- Autonomous agent concepts
- Email automation
- SharePoint-based agents
- Dataverse & Azure SQL integration
- Tools, actions & APIs

◆ Phase 3 – Advanced Agentic AI (Class 7–10)

- Agent Flow (AI workflows)
- Agentic AI
- Reusable collections
- Multilingual agents
- MCP (Model Context Protocol)
- Agent-to-agent communication

◆ Phase 4 – Enterprise & Governance (Class 11–12)

- Security & Responsible AI
- DLP policies
- Analytics & transcripts
- Publishing agents (Web, Teams, M365)

◆ Phase 5 – Career & Wrap-up (Class 13)

- Interview questions
 - Certification roadmap
 - Career guidance
 - Final recap
-

4 What is Artificial Intelligence (AI)?

◆ Definition

Artificial Intelligence refers to **machines that can think, learn, and act like humans**.

AI systems can:

- Understand language
- Learn from data
- Recognize patterns
- Make decisions
- Predict outcomes

◆ Example

- ChatGPT writing code
 - Copilot summarizing emails
 - Fraud detection
 - Image recognition
-

5 Machine Learning (ML)

◆ What is ML?

Machine Learning is a **subset of AI** where systems learn from data **without explicit programming**.

◆ Key Idea

The more data it sees, the better it becomes

◆ Note for Copilot Studio

- You **do not train ML models manually**
 - Copilot Studio uses **pre-trained AI models**
-

6 Large Language Model (LLM)

◆ Definition

A Large Language Model is an AI model trained on **huge amounts of text data** to understand and generate language.

◆ Capabilities

- Answer questions
- Write code
- Translate languages
- Summarize documents
- Reason using context

◆ Examples

- GPT
- Gemini
- Claude

Copilot Studio **uses LLMs behind the scenes**

7 GPT – Generative Pre-trained Transformer

◆ Full Form

- **Generative** – Creates new content
- **Pre-trained** – Already trained
- **Transformer** – Neural architecture

◆ How GPT Works (Simple)

GPT predicts:

“What is the next most likely word based on context?”

It does **not think**, it **predicts intelligently**.

8 Tokens

◆ What is a Token?

A token is a **unit of text** processed by AI.

It can be:

- A word
- Part of a word

- Symbol

◆ Why Tokens Matter

- AI pricing is based on tokens
 - Context size depends on tokens
 - More tokens = higher cost
-

9 Prompt

◆ Definition

A prompt is the **instruction** given to the AI.

◆ Prompt Quality Matters

- Weak prompts → vague answers
- Strong prompts → accurate results

◆ Example

✗ “Write code”

✓ “Act as a senior JS developer and create an accessible modal popup using my CSS”

10 Knowledge (Copilot Studio)

◆ What is Knowledge?

Knowledge is **business-specific data** provided to the agent.

◆ Sources

- Websites
- SharePoint
- PDFs
- Word / Excel
- Dataverse
- Azure AI Search

◆ Why Knowledge is Important

Without knowledge → generic answers

With knowledge → enterprise-accurate answers

1 1 Topics (Copilot Studio)

◆ What is a Topic?

A topic defines:

- When an agent should respond
- How the conversation flows

◆ Contains

- Trigger phrases
 - Conditions
 - Responses
 - Actions
-

1 2 Tools

◆ What is a Tool?

A tool allows AI to **take action**, not just reply.

◆ Examples

- Call API
- Trigger Power Automate
- Read database
- Send email
- Update record

Tools convert AI from **chatbot** → **worker**

1 3 Autonomous Agent

◆ Definition

An autonomous agent can:

- Decide steps
- Perform actions
- Work without human input

◆ Example Flow

1. Read email
2. Understand intent

3. Fetch data
4. Draft response
5. Send reply

Agentic AI

Agentic AI refers to systems that:

- Plan
- Reason
- Act
- Collaborate with other agents

MCP (Model Context Protocol)

◆ **What is MCP?**

MCP enables:

- Model + Context + Tools to work together
- Agent-to-agent communication
- Open AI ecosystems

MCP is shaping the **future of AI agents**

Final Mental Model (Must Remember)

Component	Meaning
-----------	---------

LLM	Brain
-----	-------

Knowledge	Memory
-----------	--------

Topics	Rules
--------	-------

Tools	Hands
-------	-------

Agent	Worker
-------	--------

Copilot Studio AI Factory
