

Copilot Studio

Training Program

Day 01

01

Sessions are Recorded and share with you after the sessions

03

Respect everyone and ask questions which are relevant to training only

02

Recording is only for you!
Sharing this with anyone else is prohibited and illegal.

Don't use any AI tool to join meeting!

04

Do Practice after each session

House Keeping

Introduction to AI

Basics of AI Terminology you should know

History of Copilot

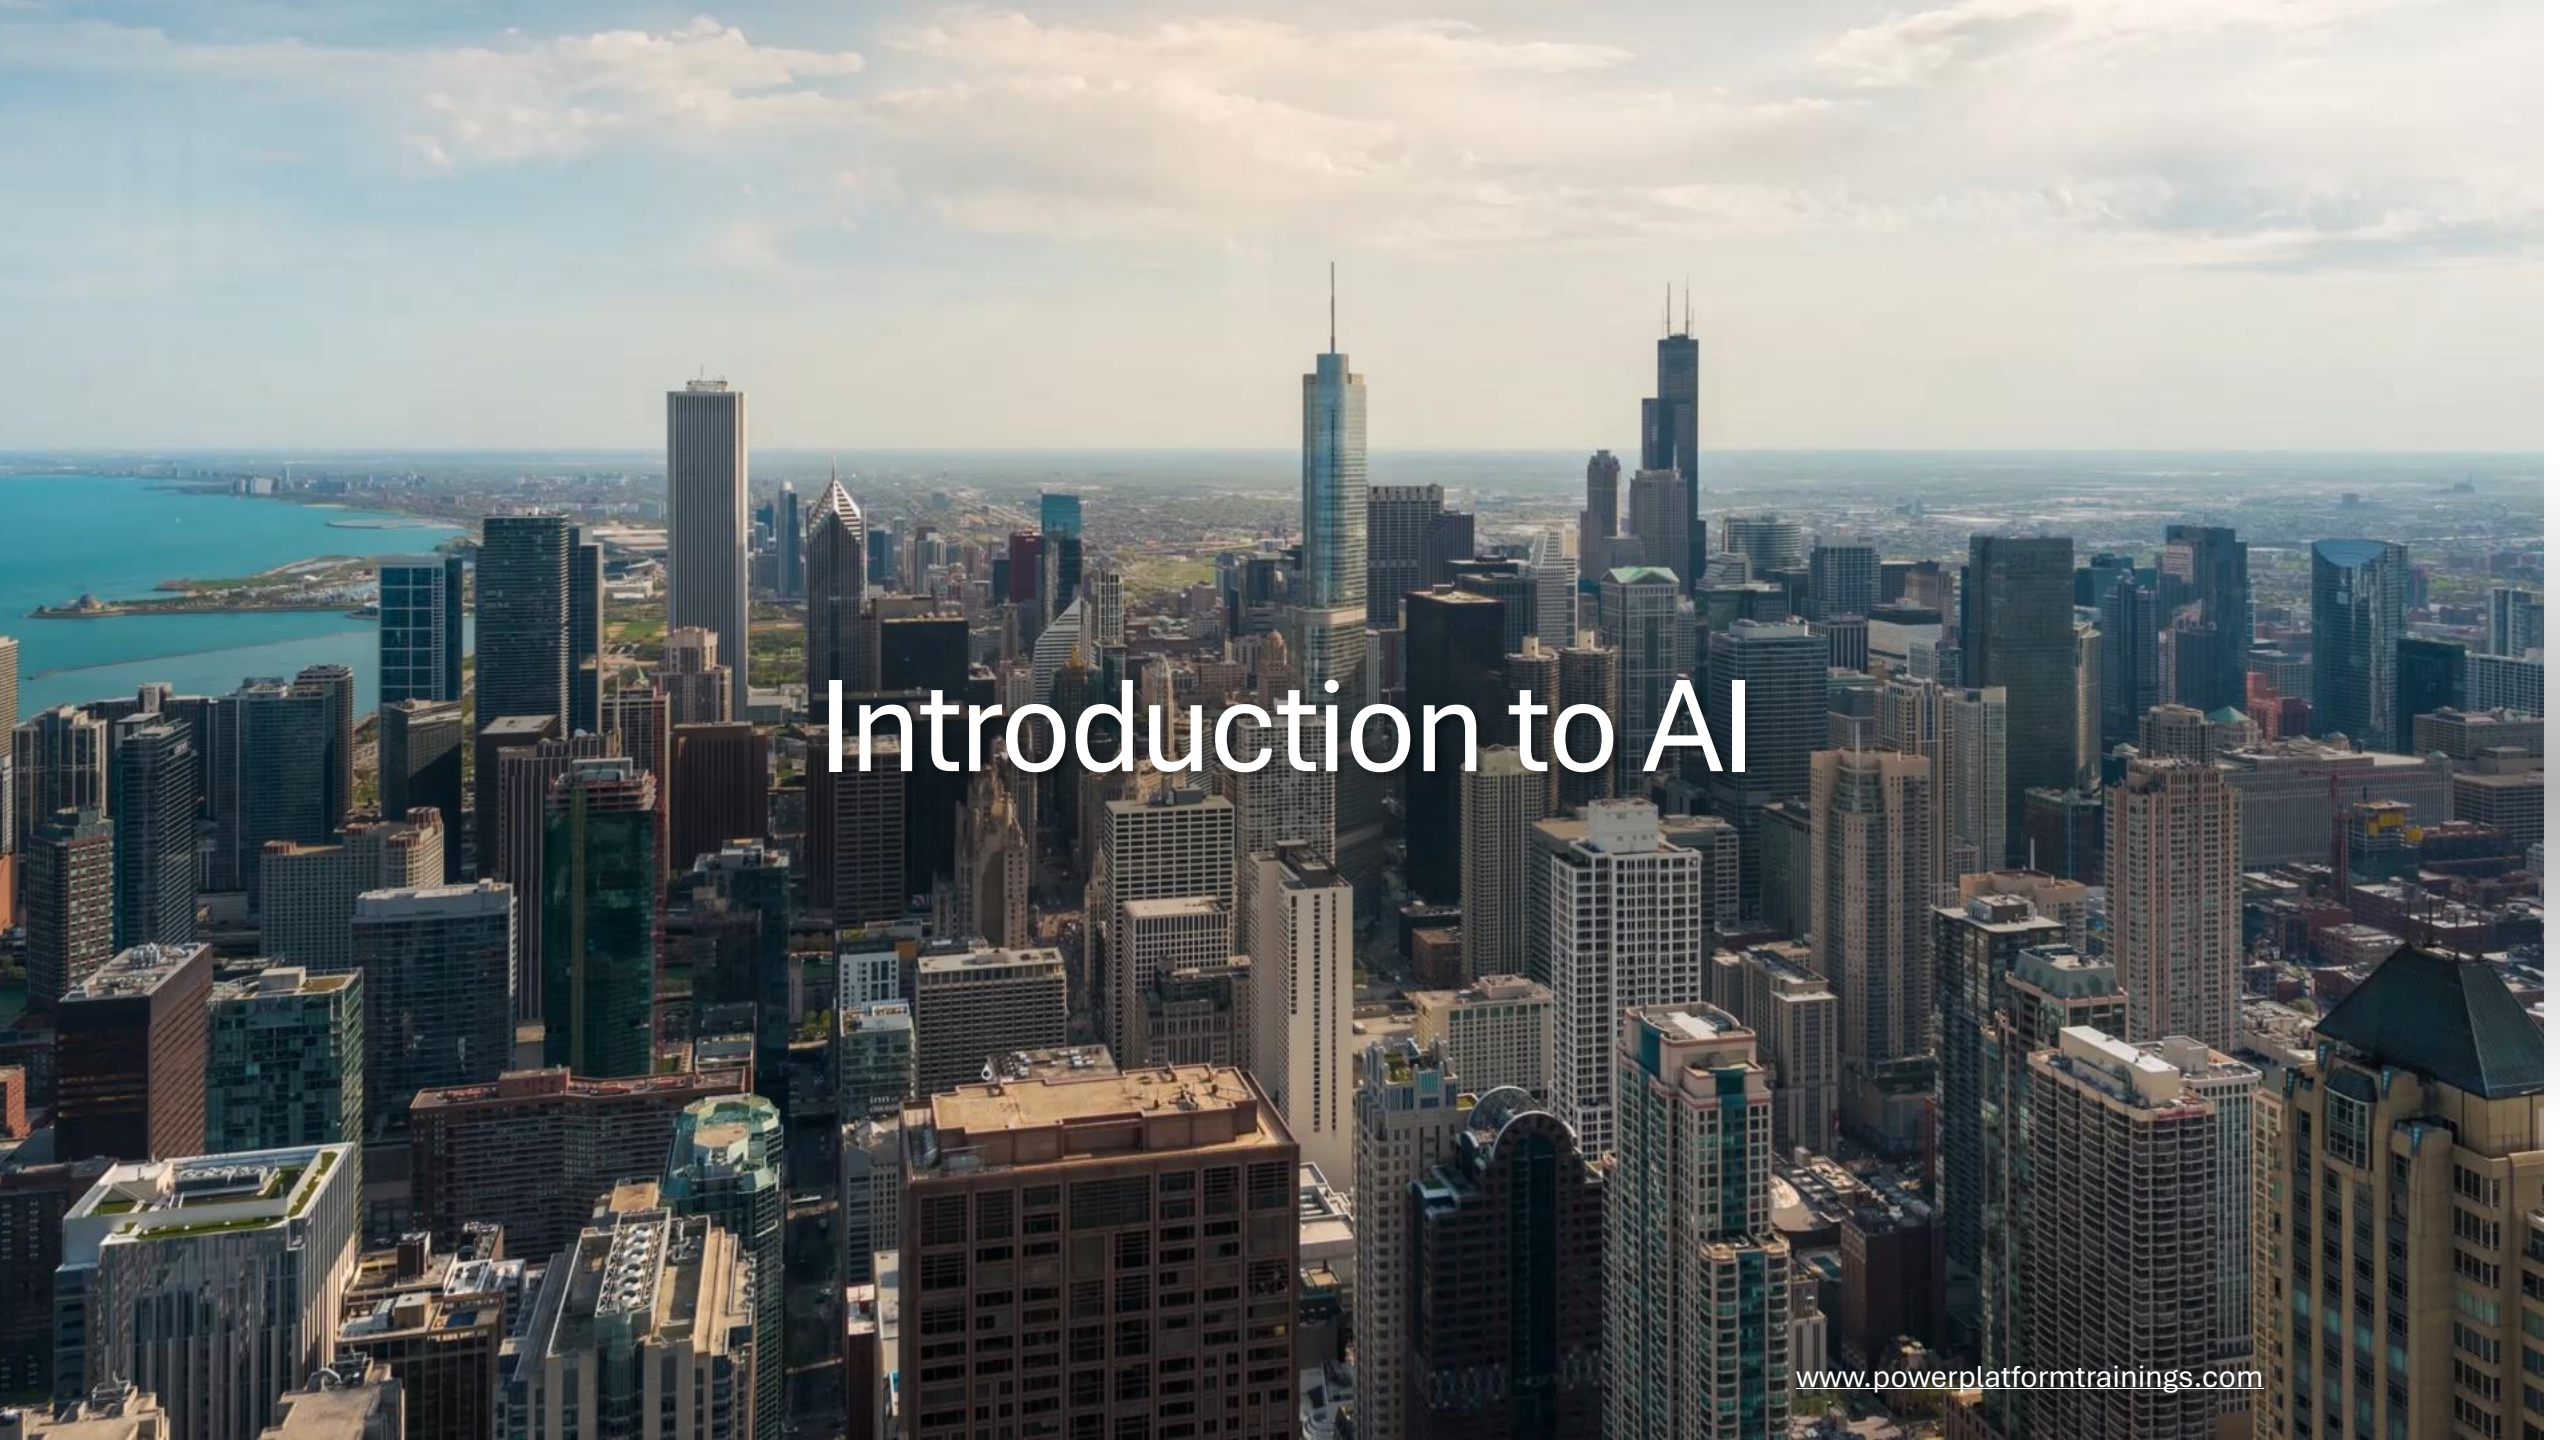

What is GPT?

What is Microsoft Copilot?

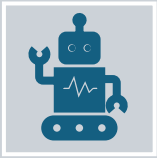

Introduction to Copilot Studio

An aerial photograph of the Chicago skyline, showing a dense cluster of skyscrapers. The Lake Michigan is visible on the left side of the image. The sky is blue with some white clouds. The text "Introduction to AI" is overlaid in the center of the image.

Introduction to AI

What is AI

AI refers to machines programmed to think, learn, and act like humans.

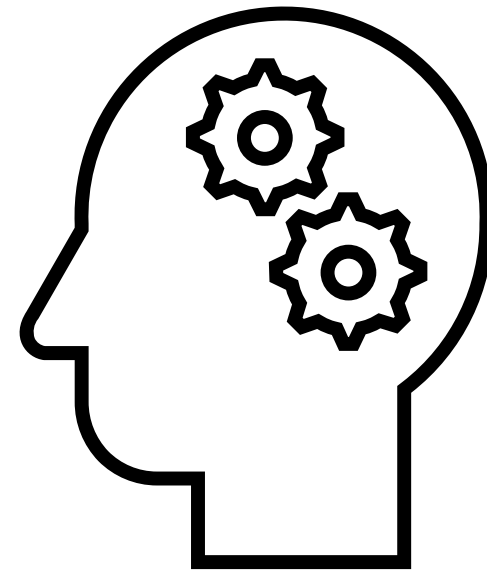

It involves tasks like problem-solving, learning, and decision-making.

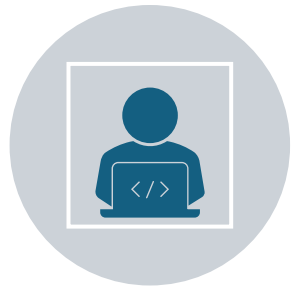

What is AI?

Software that imitates human capabilities

- Predicting outcomes and recognizing patterns based on historic data.
- Recognizing abnormal events, making decisions, and taking appropriate action.
- Interpreting visual input.
- Understanding language and engaging in conversations.
- Extracting information from sources to gain knowledge.

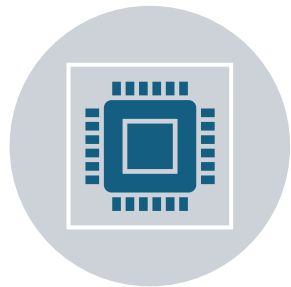

Key Components of AI

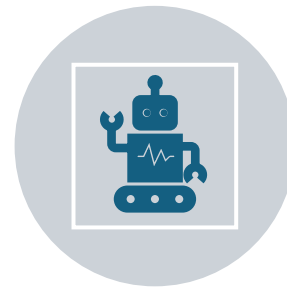

Machine Learning (ML):
Teaching machines to learn
from data.

**Natural Language
Processing (NLP):**
Understanding and
generating human language.

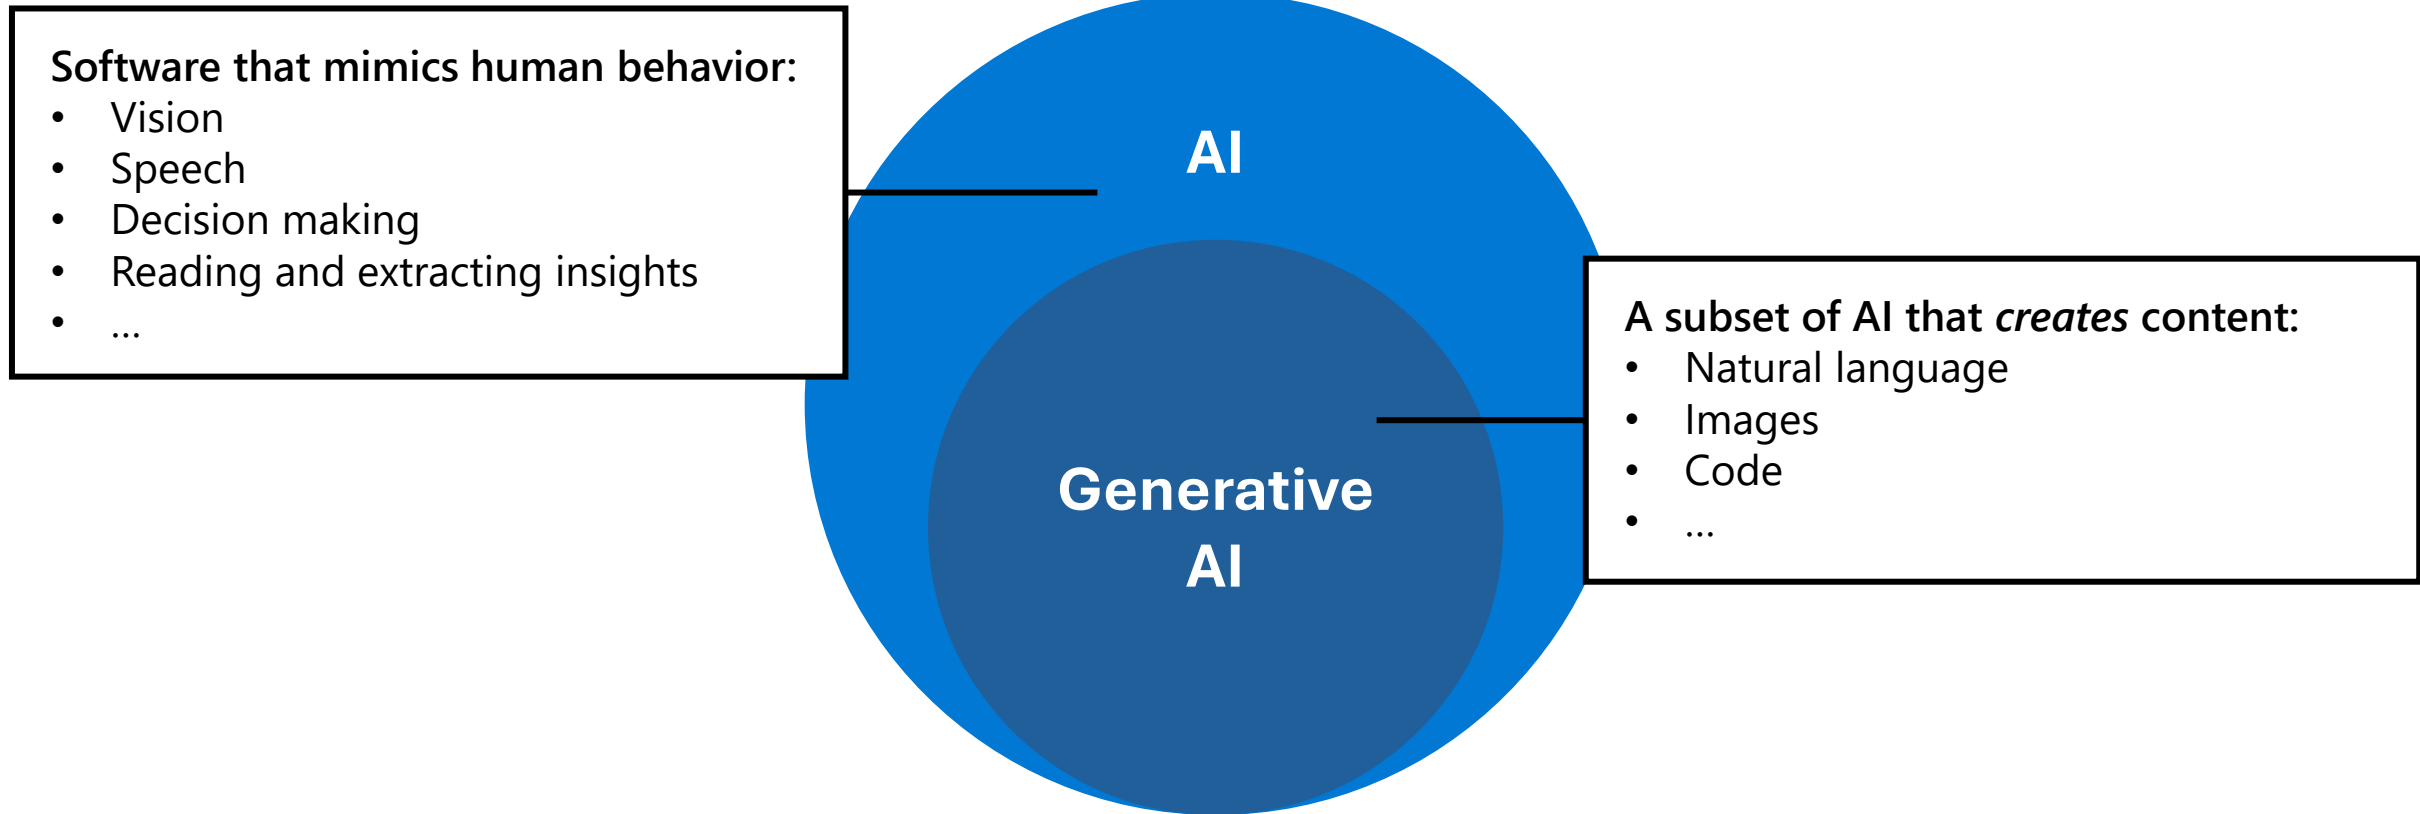

Computer Vision:
Interpreting and processing
visual data.

Robotics: Automating
physical tasks.

Basic AI concepts

Applications of AI

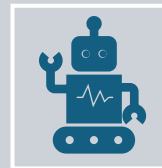

Healthcare (disease diagnosis)

Finance (fraud detection)

Transportation (self-driving cars)

Customer Service (chatbots)

GPT

Generative Pre-trained Transformer

Key Terminologies to remember

Generative AI

- Models that **create new content**: text, images, code, audio, video.

LLM (Large Language Model)

- A model trained on massive text data to understand and generate language
Examples: GPT, Claude, Gemini

Token

- Small chunks of text (not words). AI pricing + limits are based on **tokens**, not characters.

Context Window

- Maximum amount of text a model can “remember” in one request.

Key Terminologies to remember

Prompt

- The input you give to the AI (instruction + context).

System Prompt

- Rules defining **how the AI should behave** (tone, limits, role).

Temperature

- Controls randomness:
- 0.0 → deterministic
- 1.0+ → creative / risky

Key Terminologies to remember

RAG (Retrieval-Augmented Generation)

- AI that:
 - 1. Searches your data**
 - 2. Injects it into the prompt**
 - 3. Generates an answer**

Embedding

- Turning text into **numbers (vectors)** so machines can compare meaning.

Vector Database

- Stores embeddings for fast semantic search
Examples: Pinecone, FAISS, Azure AI Search

Key Terminologies to remember

Agent

- An AI that can:
- Think
- Decide
- Call tools
- Take actions

Not just chat — **acts autonomously.**

Tool Calling / Function Calling

- AI triggers:
- APIs
- Workflows
- Database queries
- Automations

Agentic AI

- AI systems that:
- Plan steps
- Execute actions
- Learn from outcomes

This is where Copilot Studio & AutoGPT live.

Key Terminologies to remember

Hallucination

- When AI confidently gives **wrong or made-up answers**.

Grounding

- Forcing AI to answer **only from trusted data**.

Multimodal

- AI that understands **text + image + audio + video** together.

Key Terminologies to remember

A2A (Agent-to-Agent)

- AI agents talking to other AI agents.

Autonomous Agents

- End-to-end business flow run by AI agents.

Synthetic Data

- AI-generated data used for training/testing.

Model Orchestration

Using multiple models together for better results.

Generative AI Models

Text & Code Generation

GPT-4, Claude 3, Gemini 1.5, LLaMA 3, Mistral.

Used for chatbots, code generation, documentation, business logic explanations.

Code-Focused Generative Models

GitHub Copilot, Code LLaMA, DeepSeek-Coder.

Used for writing code, explaining legacy code, refactoring, test case generation.

Image Generation Models

DALL·E 3, Stable Diffusion, Midjourney, Adobe Firefly.

Used for marketing creatives, posters, UI mockups, social media assets.

Video Generation Models

Sora, Runway Gen-2, Pika Labs.

Used for ads, reels, product demos.

Audio & Voice Generation

Whisper, ElevenLabs, Azure Neural TTS.

Used for voice bots, meeting transcription, audiobooks, call center automation.

Multimodal Models

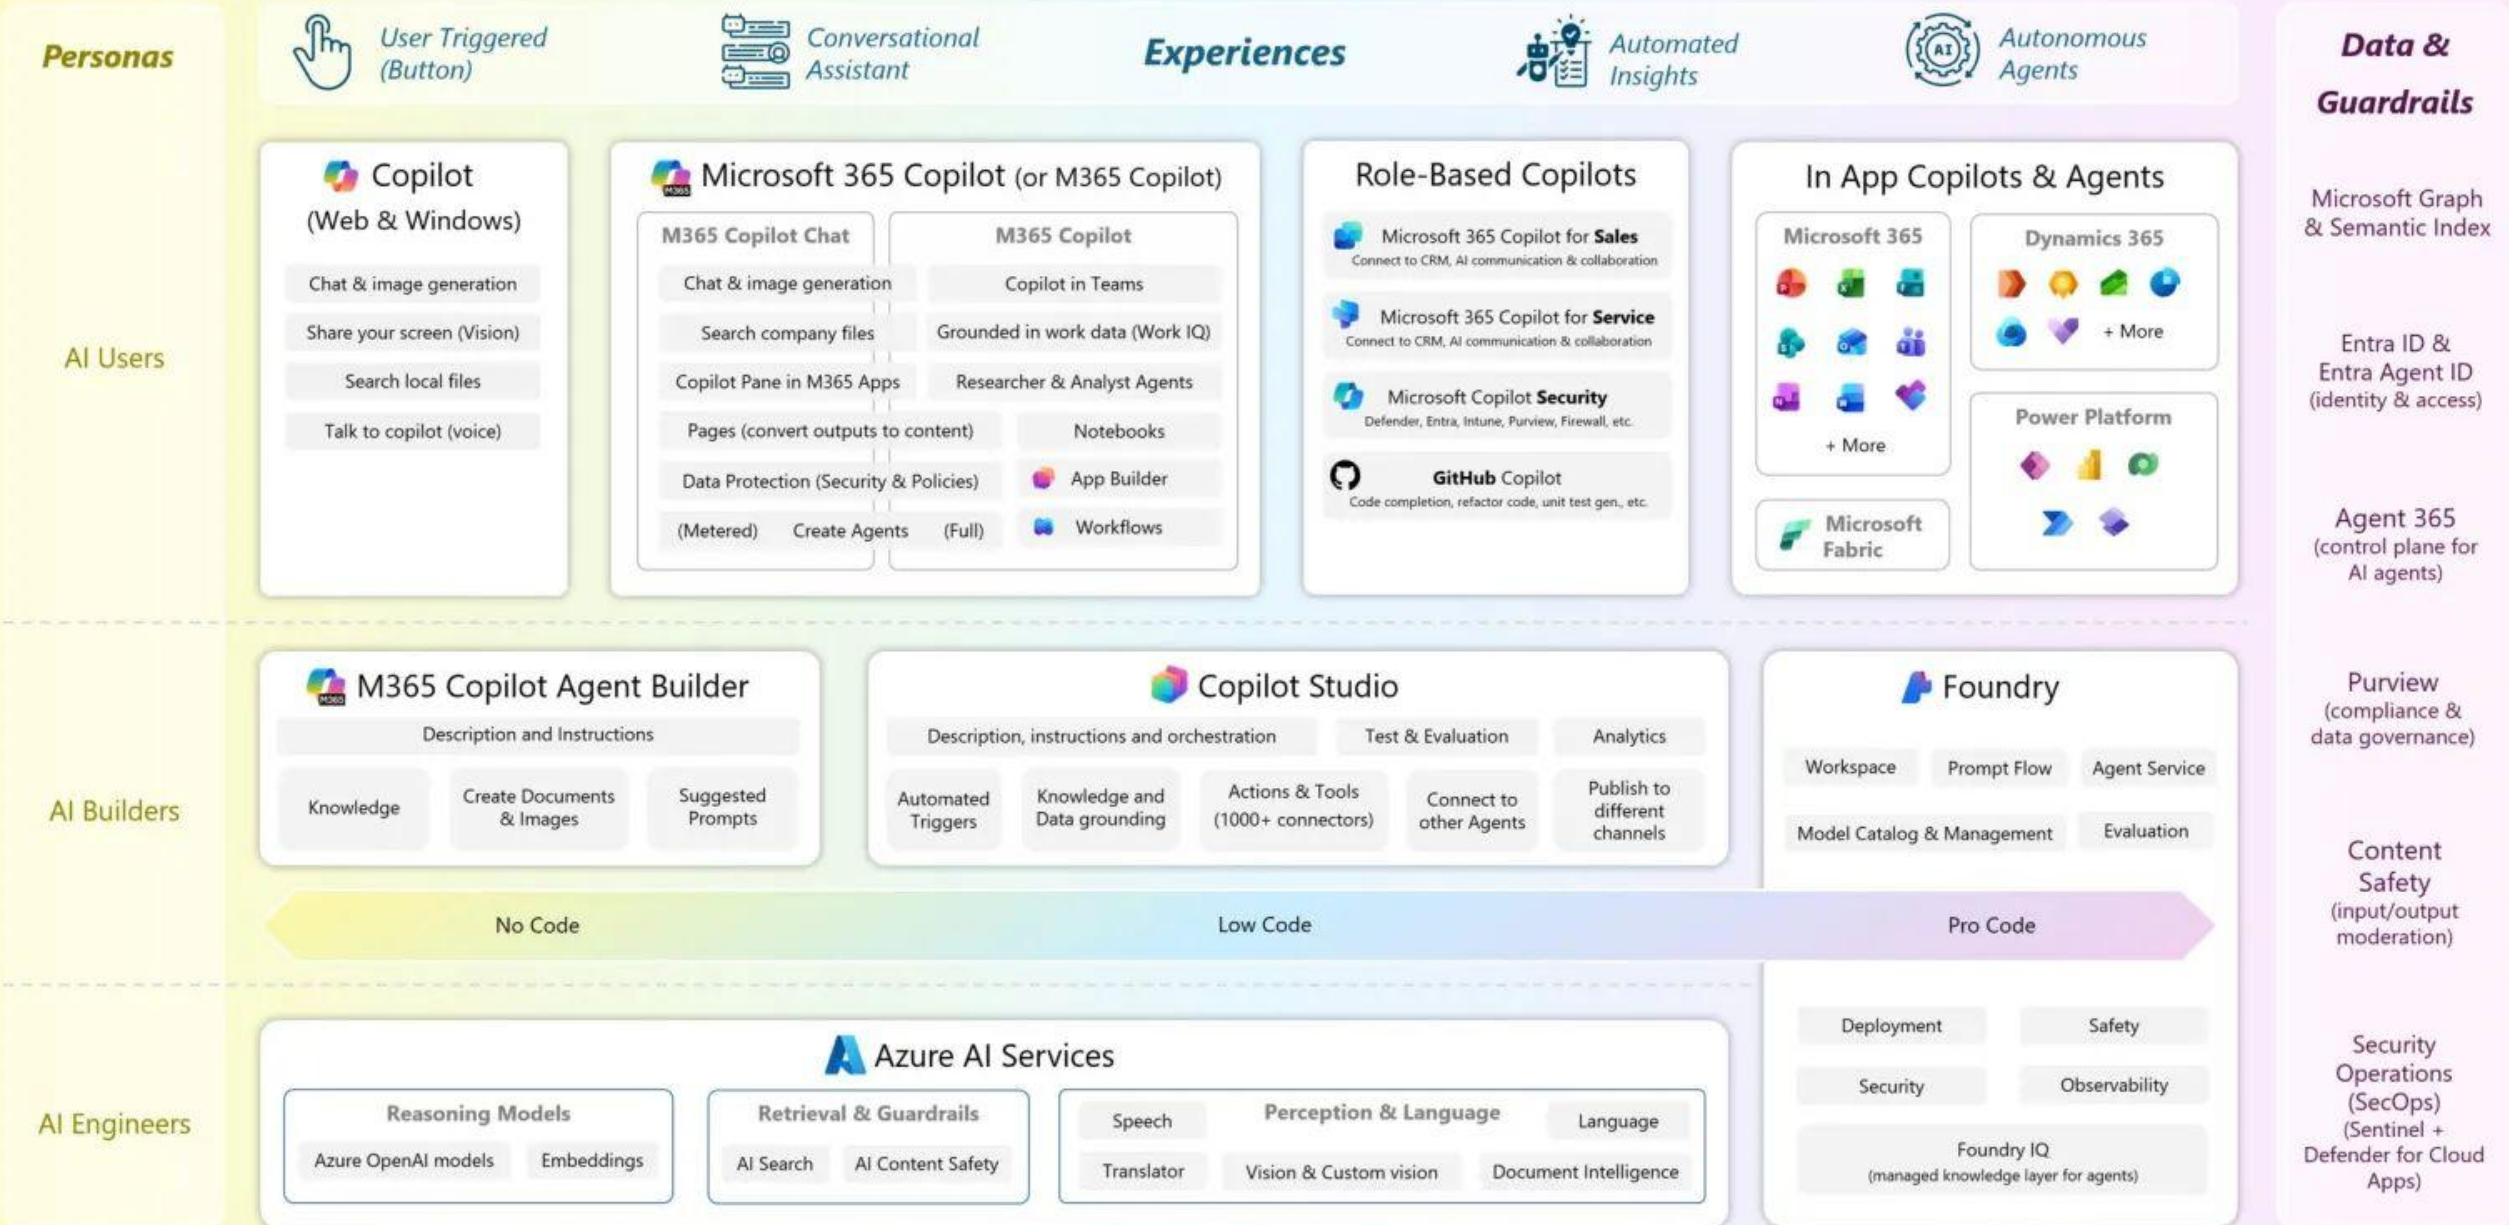

GPT-4o, Gemini 1.5 Pro, Claude 3 Vision.

Used for document understanding, image + text reasoning, vision-enabled copilots.

Let's Deep Dive into Microsoft AI Space

Microsoft Copilots & AI Agents Ecosystem Diagram

MICROSOFT AI AGENT ECOSYSTEM: Choosing the Right Path

 BUSINESS USERS (No Code)	Copilot Studio (Lite) Agent Builder	• Simple declarative agents • No coding	• Automate tasks • Empower staff 
 BUSINESS USERS (Low-Code)	Copilot Studio (Full)	• Low-code tools + domain knowledge • Extend M365 Copilot Teams/Slack agents	• Build low-code solutions • Extend productivity 
 PRO DEVELOPERS (M365 Extensions)	M365 Agents SDK	• Full dev flexibility • Complex extensions	• Custom integrations • Advanced behaviors in M365 
 PRO DEVELOPERS (Azure Solutions)	Foundry Agent Service	• Azure AI & backend integration • Multiple models, storage, search	• Scalable, custom solutions on Azure 
 PRO DEVELOPERS (Standalone/Multi-Agent)	Microsoft Agent Framework	• Single/multi-agent systems • Orchestration patterns	• Complex, orchestrated systems across environments 

Microsoft generative AI solutions

Solution	Use case examples
Microsoft Copilot	• Draft emails • Create presentations • Summarize Teams meetings
Azure AI	• Chatbots • Document automation • Personalize experiences
GitHub Copilot	• Create apps • Automate workflows • Generate dashboards
Dynamics 365 Copilot	• Forecast sales • Automate customer service
Power Platform Copilot	• Create apps • Automate workflows • Generate dashboards

Business value:

- Boost productivity
- Accelerate decision-making
- Enhance customer experiences
- Reduce operational costs
- Stay competitive

Top 6 Reasons to use Microsoft Copilot

Seamless
integration with
Microsoft tools

Contextual
suggestions from
the business data

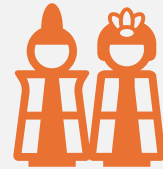

Enhanced
productivity

Enterprise-grade
security

Improved
cybersecurity

Data privacy

Microsoft Copilot Studio overview

Products included in Microsoft Power Platform

Microsoft Power Platform

The world's **most complete** platform for developer productivity, spanning no-code to pro code

Copilot Studio overview

- Copilot Studio is a graphical, low-code tool for both creating an agent and extending a Microsoft 365 Copilot with your own enterprise data and scenarios.

The screenshot displays the Microsoft Copilot Studio web interface. At the top, the Microsoft logo and 'Copilot Studio' are visible, along with the environment set to 'Microsoft (default)'. A sidebar on the left contains navigation icons for Home, Create, Agents, Library, and a menu. The main area is titled 'Describe your agent to create it' and features a large text input field with the prompt 'Use everyday words to describe what your agent should do'. Above this field are three buttons: 'Helpdesk', 'Expense tracking', and 'HR and benefits'. A disclaimer below the input field states: 'This AI-powered feature above is currently in preview. [See terms](#) and [supplemental terms](#)'. Below the main section, there is a 'Recent' section with a table of existing agents and a 'Start with a template' section listing various pre-built agent templates.

Name	Type	Last modified	Last published	Owner
 Copilot for Microsoft 365	Microsoft		Never	

Start with a template

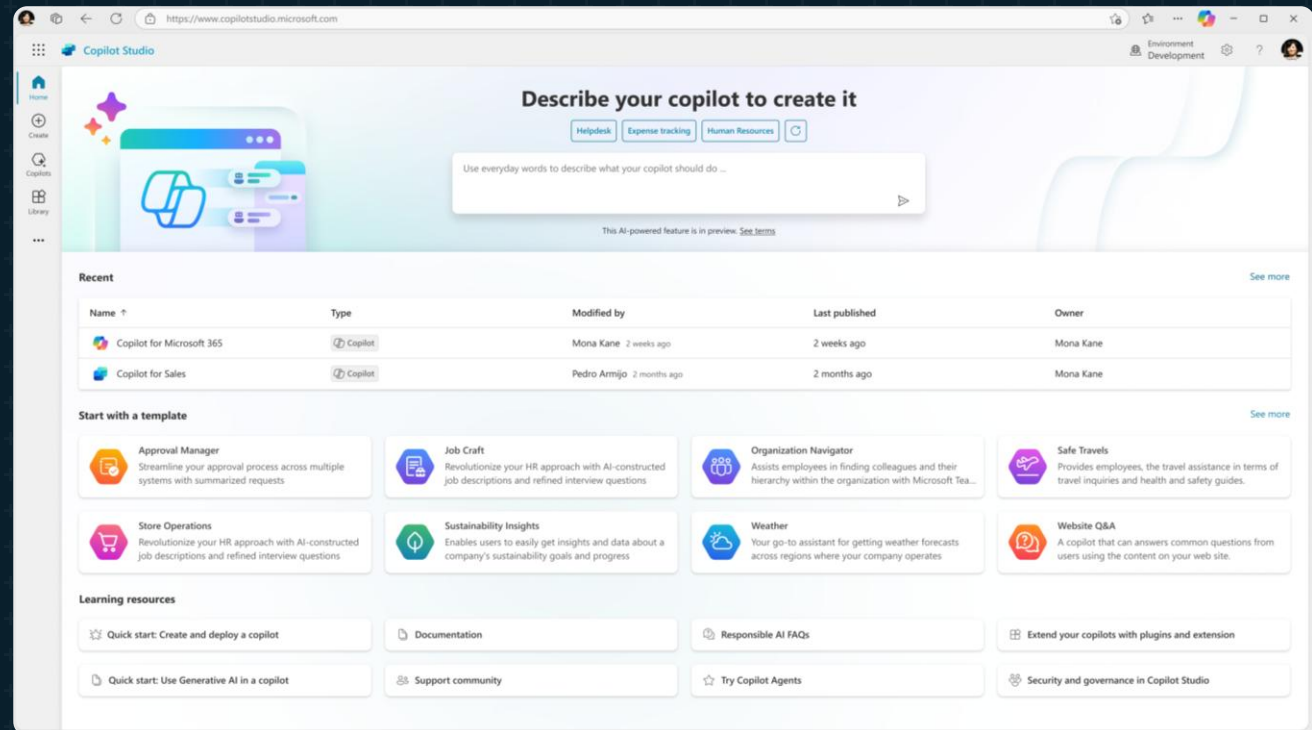

Templates are currently a preview feature. See [supplemental terms](#)

- Safe Travels Agent**
Provides answers to common travel questions and related health and safety guidelines.
- Website Q&A**
Instantly answer user questions using the content of your web site or other knowledge.
- Team Navigator Agent**
Assists employees in finding colleagues and their hierarchy within the organization using Microsoft Teams.
- IT Helpdesk Agent**
Empowers employees to resolve issues and effortlessly create/view support tickets.
- Store Operations**
Improve the efficiency of retail frontline workers by enabling easy access to store procedures and policies
- Case Management Agent**
Provide round-the-clock automated support to customers by understanding their issues and creating cases.

Microsoft Copilot Studio

Your copilot, your way

Copilot Studio is an end-to-end conversational AI product for **building your own copilots** or **extending Microsoft Copilot** with generative AI, large language models and **your data**.

Create, manage, publish and extend Copilots
Live in minutes - all from one tool
and E2E SaaS service

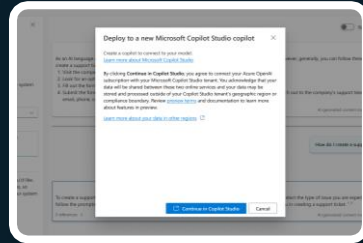

Build & Publish

Copilot Studio

Analyze & Improve

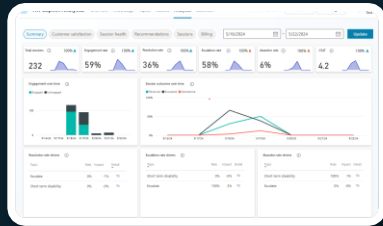

Integrate with AI Services

Integrate with Azure AI Studio, Azure Cog Services, Bot Framework and various other Microsoft conversational services

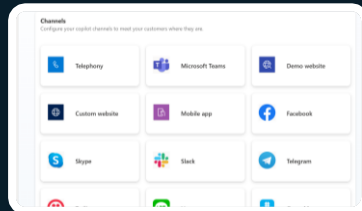

Monitor and Improve

with rich out-of-the-box insights and analytics

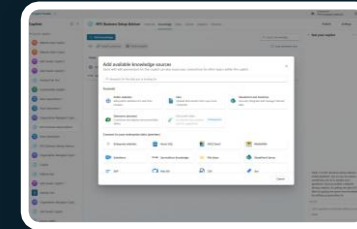

Publish to multiple channels,
and go live instantly on the SaaS
service or choose to extend
Copilot for Microsoft 365 with
your custom capabilities

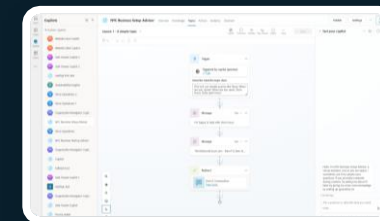

Chat over knowledge with Gen AI

Get enterprise specific answers
over your files, websites, internal
shares, Dataverse, third party
systems and more

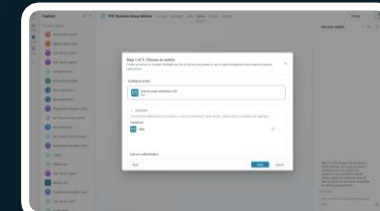

Create specific topics

Supplement generative
responses with specific, curated
topics where you want tight
control. Build them easily with
the powerful graphical studio

Build actions & Plugins

Create actions, plugins, use
1000s of pre-built connectors
or Power Automate to call
your backends and APIs

Copilot Studio

Solutions for every industry

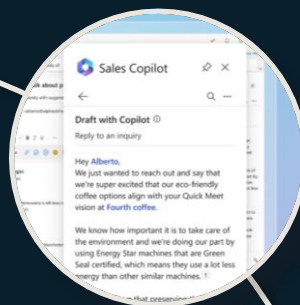

Customer service

Resolve 14% more customer issues per hour

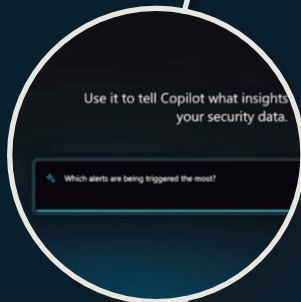

Sales

Streamline the process of checking and answering emails

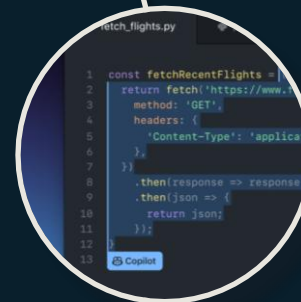

Security operations

Respond to threats in minutes, not hours

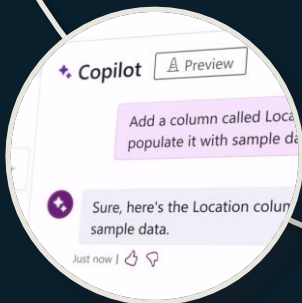

Software developers

Code 55% faster

Data & IT pros

Create workflows in half the time

Knowledge workers

Complete tasks 37% quicker
