

Get Started with Copilot Studio & Agents – Part 1

Day 02

Agenda

Let's Look M365 Copilot

Introduction to Copilot Studio

Overview of Environments

Solution Development in Copilot

Introduction to Agent

Different Components in Agents

Get Started with First Agent Development

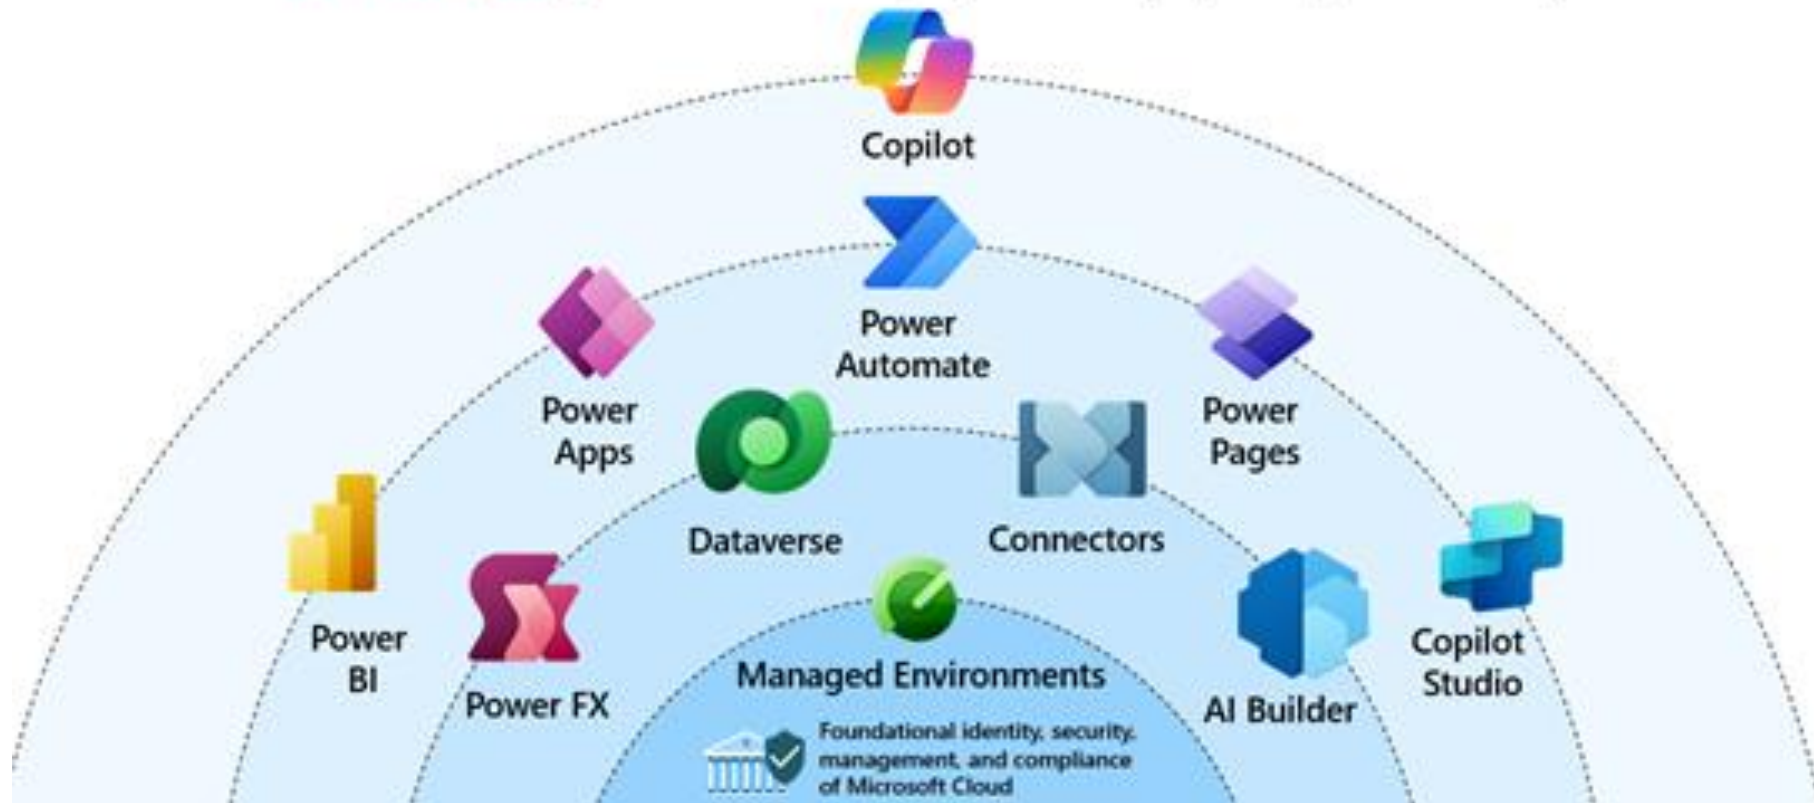

Microsoft Copilot Studio overview

Products included in Microsoft Power Platform

Microsoft Power Platform

The world's **most complete** platform for developer productivity, spanning no-code to pro code

Copilot Studio overview

- Copilot Studio is a graphical, low-code tool for both creating an agent and extending a Microsoft 365 Copilot with your own enterprise data and scenarios.

The screenshot displays the Microsoft Copilot Studio web interface. The top navigation bar includes the Microsoft logo, 'Copilot Studio' title, and environment settings (Microsoft (default)). A left sidebar contains navigation icons for Home, Create, Agents, Library, and a menu icon. The main content area is titled 'Describe your agent to create it' and features a large text input field with a placeholder 'Use everyday words to describe what your agent should do'. Above the input field are three buttons: 'Helpdesk', 'Expense tracking', and 'HR and benefits'. Below the input field, a note states: 'This AI-powered feature above is currently in preview. [See terms](#) and [supplemental terms](#)'. Below this section, there is a 'Recent' section with a table listing the 'Copilot for Microsoft 365' agent. Further down is a 'Start with a template' section with a grid of six agent templates, each with an icon and a brief description.

Describe your agent to create it

Helpdesk Expense tracking HR and benefits

Use everyday words to describe what your agent should do

**Safe Travels Agent**
Provides answers to common travel questions and related health and safety guidelines.

**Website Q&A**
Instantly answer user questions using the content of your web site or other knowledge.

**Team Navigator Agent**
Assists employees in finding colleagues and their hierarchy within the organization using Microsoft Teams.

**IT Helpdesk Agent**
Empowers employees to resolve issues and effortlessly create/view support tickets.

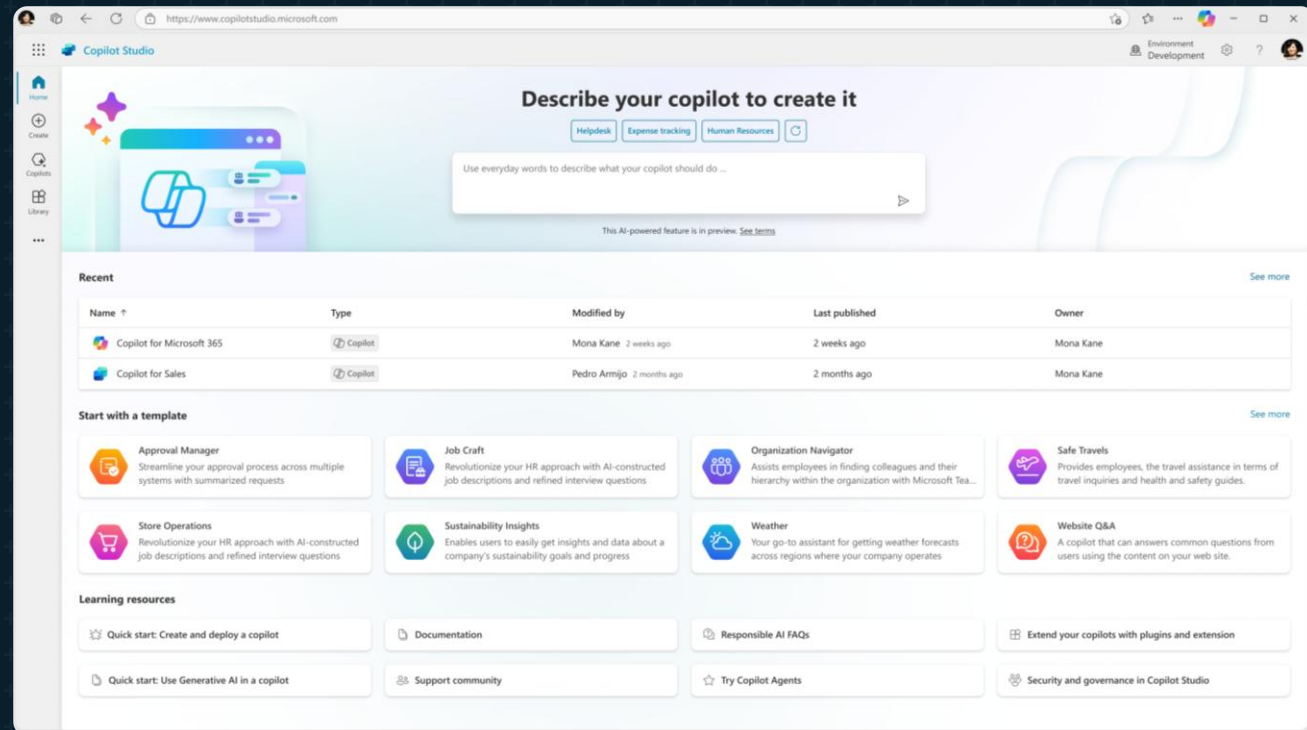

**Store Operations**
Improve the efficiency of retail frontline workers by enabling easy access to store procedures and policies

**Case Management Agent**
Provide round-the-clock automated support to customers by understanding their issues and creating cases.

Microsoft Copilot Studio

Your copilot, your way

Copilot Studio is an end-to-end conversational AI product for **building your own copilots** or **extending Microsoft Copilot** with generative AI, large language models and **your data**.

Create, manage, publish and extend Copilots

Live in minutes - all from one tool
and E2E SaaS service

Build & Publish

Analyze & Improve

Integrate with AI Services

Integrate with Azure AI Studio,
Azure Cog Services, Bot
Framework and various other
Microsoft conversational services

Monitor and Improve

with rich out-of-the-box
and

Publish to multiple channels,

and on the SaaS
service or choose to
with
your custom capabilities

Chat over knowledge with Gen AI

Get enterprise specific answers
over

and more

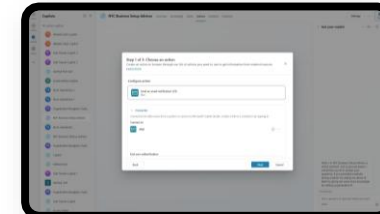

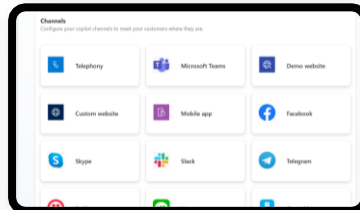

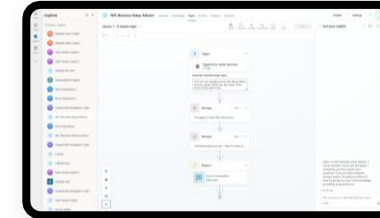

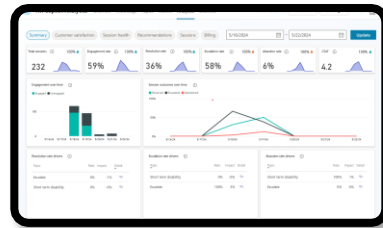

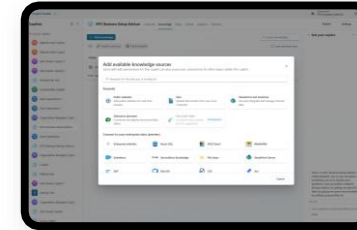

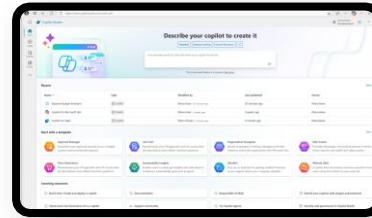

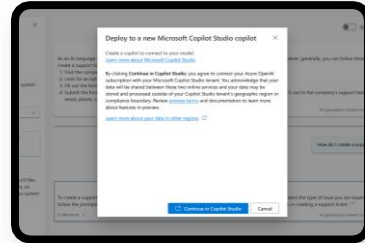

Create specific topics

Supplement generative
responses with
where you want tight
control. Build them easily with
the powerful graphical studio

Build actions & Plugins

Create actions, plugins, use

or to call
your backends and APIs

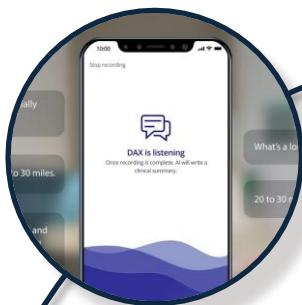

Solutions for every industry

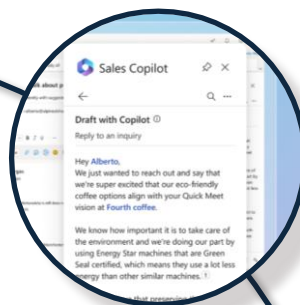

Customer service

Resolve 14% more customer issues per hour

Sales

Streamline the process of checking and answering emails

Security operations

Respond to threats in minutes, not hours

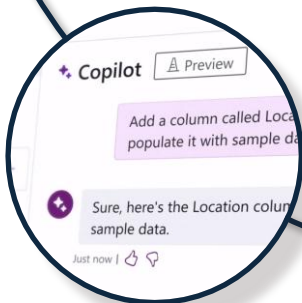

Software developers

Code 55% faster

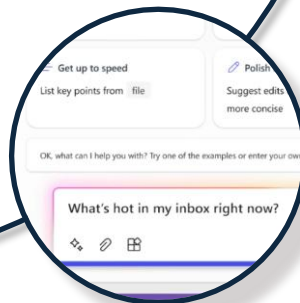

Data & IT pros

Create workflows in half the time

Knowledge workers

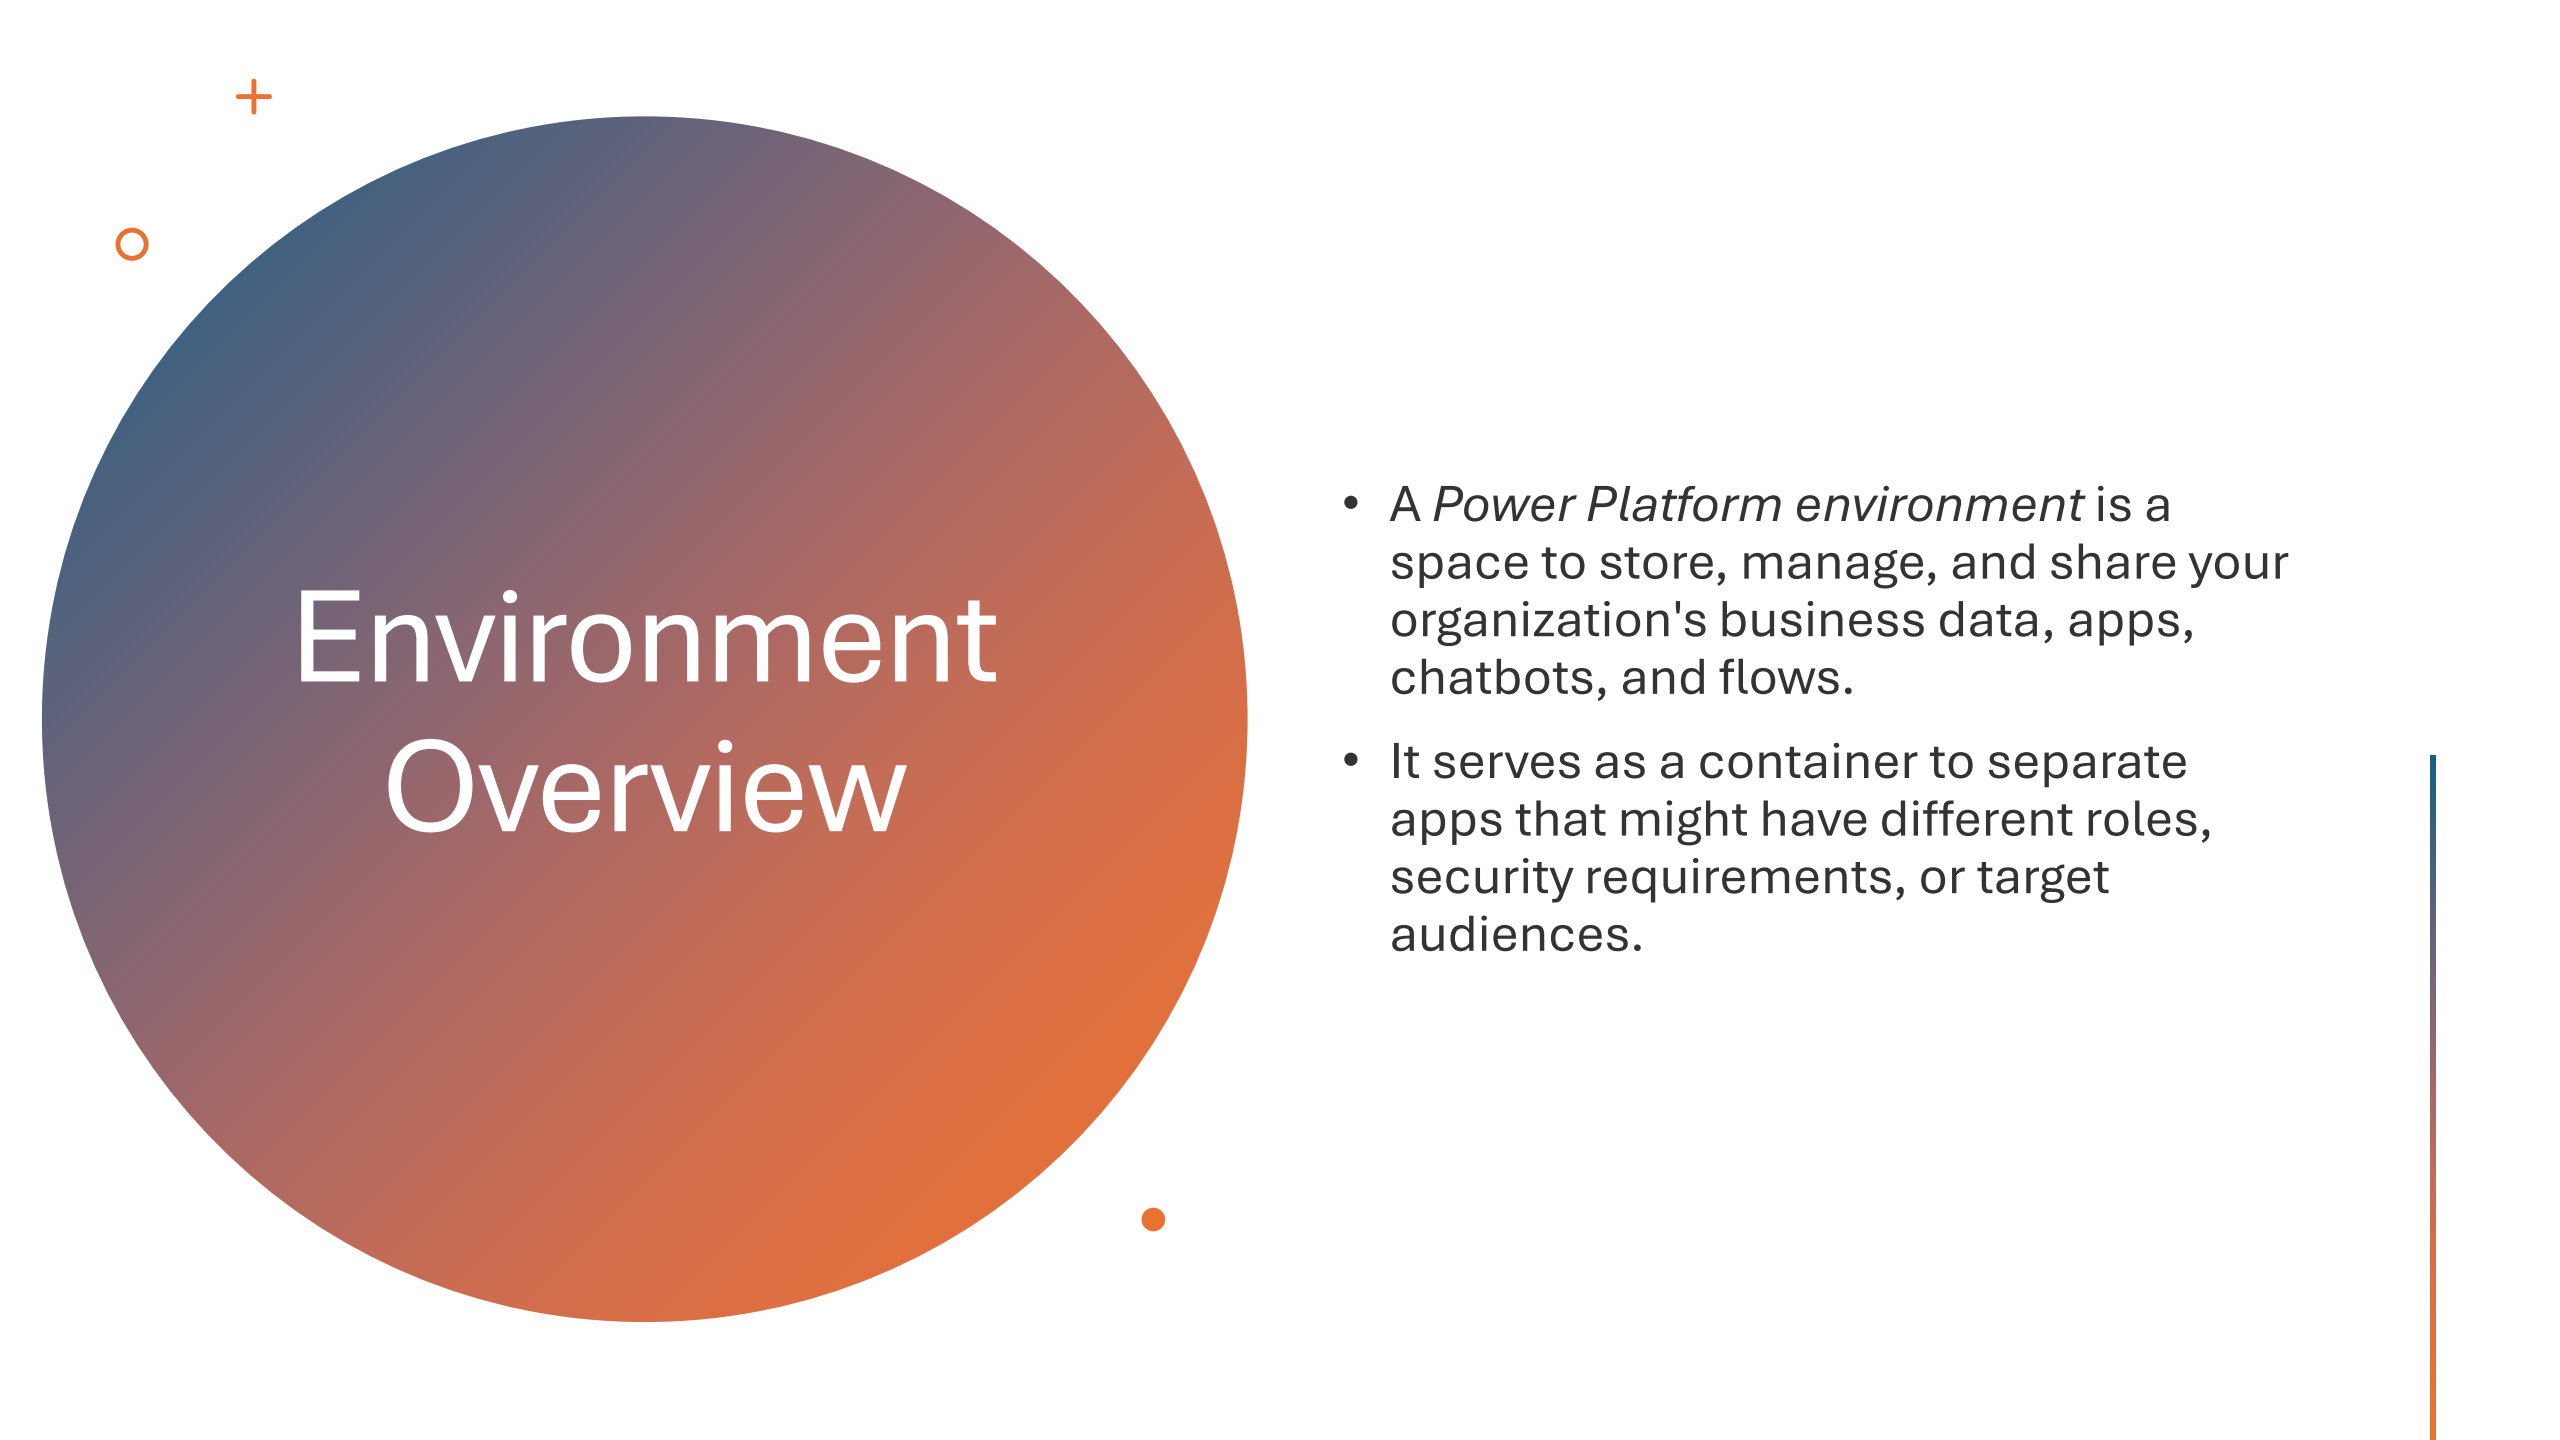

Complete tasks 37% quicker

Environments in Power Platform

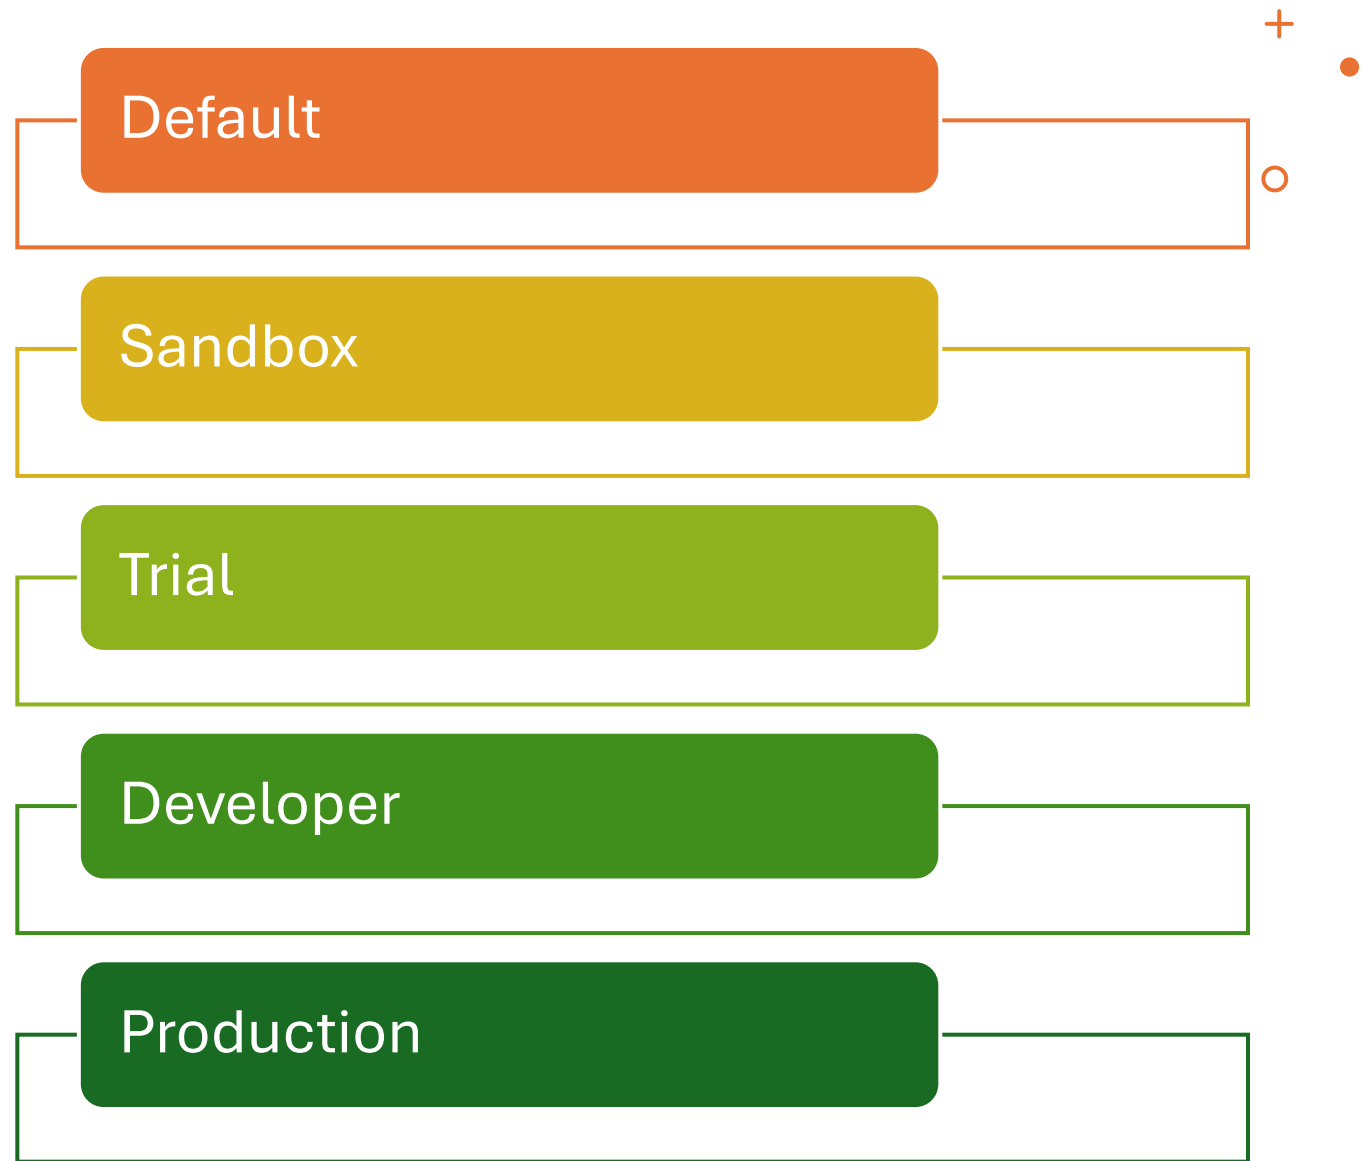

Environment Overview

- A *Power Platform environment* is a space to store, manage, and share your organization's business data, apps, chatbots, and flows.
- It serves as a container to separate apps that might have different roles, security requirements, or target audiences.

Type of Environments

Solution

- Solutions are the mechanism for implementing ALM in Power Apps and Power Automate.
- Two typed of Solution (More Depth during deployment session)
 - Managed solutions
 - Unmanaged solutions

What is an agent?

An agent is a powerful AI companion that can handle a range of interactions and tasks.

Agents coordinate a collection of language models, along with instructions, context, knowledge sources, topics, actions, inputs, and triggers to accomplish your desired goals.

You can easily create agents in Copilot Studio without the need for data scientists or developers. Some of the ways you might use agents include:

Demo time
