

Get Started with Autonomous Agents with Authentication and Distribution

Day 06

Get Started with Triggers, Actions and Build your first
Autonomous Agent

Agenda

Types of Authentication in Copilot Studio

Publish and Distribute Agents

Introduction to Tools

Introduction to Trigger

Introduction to Autonomous Agent

Create a first Autonomous Agent

Work with Prompts

Work with Custom Azure AI Foundry Models

Real Life Case Study

Introduction to Autonomous Agents

AI-driven system that performs **tasks without human intervention**

Uses **knowledge bases, AI reasoning, and workflow automation**

Example: Processing return requests, answering customer inquiries

Key Features

Decision-Making Ability – Evaluates policies, makes informed choices

Self-Sufficiency – Runs independently without manual input

Context Awareness – Understands customer intent & extracts key details

Workflow Automation – Triggers actions like emails, approvals, & updates

Adaptive Learning – Improves responses using knowledge bases
